HIGHER SECONDARY SECOND YEAR

BIO CHEMISTRY

Model Question Paper - I

Time	e: 2.30 Hours	Marks: 70
	PART – A	
Answe	er all the questions	
СНОС	OSE THE CORRECT ANSWER	$15 \times 1 = 15$
1.	Erythrocyte fragility test is based on the principle of	
a)	Surface tension	
b)	osmosis	
c)	viscosity	
d)	buffering action	
2.	Which one of the pair of enzymes is example for an endopeptidase	
	a) amylase and lipase	
	b) Gastrin and esterase	
	c) nuclease and rennin	
	d) pepsin and trypsin	
3.	D amino acids are absorbed by	
	a) Passive diffusion	
	b) active transport	
	c) both of them	
	d) none of the above	

4.	At the time of starvation undergoes glyconeogenesis?
	a) glycine
	b) glycerol
	c) propionate
	d) sucrose
5.	Translocation is catalysed by the enzyme
	a) RNA polymerase
	b) helicase
	c) ligase
	d) translocase
6	6 is an example for biogenic amines
	a) Tryptophan
	b) Histamine
	c) Alanine
	d) Tyrosine
7	7. Atherosclerotic individuals will have in plasma
	a. LDL, VLDL
	b. Wax and fatty acids
	c. HDL and EFA
	d. Lysolecithin
8.	Which one is a saturated acid?
	a) oleic acid
	b) cerebronic acid
	c) nervonic acid
	d) stearic acid

9. G-C	rich region followed by A-T rich region is a signal for
a)	initiation
b)	elongation
c)	termination
d)	primer termination
10. The m	netabolite that accumulates in Taysach's disease in
a)	galactose
b)	tyrosine
c)	ganglioside
d)	glucose
11. Succi	nate dehydrogenase in mitochondria is a marker of
a)	outer membrane
b)	inner membrane
c)	matrix
d)	inter membrane space
12. When	FADH ₂ is the substrate in ETC, molecules of ATP are formed
a)	3
b)	2
c)	4
d)	7
13. The re	eciprocal of Michaelis Menton equation was considered by
a)	lineweaver Burk
b)	Fischer
c)	Koshland
d)	Dixon

14. ln <i>i</i>	AIDS, the cells which are affected by HIV	
	a) mast cells	
	b) T helper cells	
	c) T suppressor cells	
	d) B memory cells	
15. The	e causative agent of pneumonia in	
	a) Adeno virus	
	b) mumps virus	
	c) Rabies virus	
	d) Varicella	
_	PART – B	
Answe	er any six in which Q No 23 is compulsory.	6 x 2 = 12
16. Wr	ite about Hay's test?	
17. Wr	ite about the digestion of nucleic acids in small intestine	
18. Ho	w pyruvate is converted to lactate?	
19. Wh	nat is the other name of Niacin? How is it synthesized from Tryptop	phan?
20. Wh	nat are essential fatty acids? Write their functions. Give examples.	
21. Wr	ite any three differences between replication and transcription.	
22. Wr	ite the cause of Galaotosemia.	
23. Wh	nat is irreversible enzyme inhibition?	
24. Wh	nat are haptens?	
	PART – C	
Answe	er any six in which Q No 28 is compulsory.	6 x 3 = 18
25. Ex	plain Starling's hypothesis.	
26. Wr	ite a note on Gastrin.	
27. Ca	Iculate the energy field per glucose molecule upon oxidation in gly	colvsis.

28. How is methionine converted to active methionine?	
29. How are Bile salts formed?	
30. Write a short note on Exonucleases.	
31. What are tumour markers? Given an example.	
32. Define oxidative phosphorylation.	
33. What are the role of antigen presenting cells?	
PART – D	
	5 = 25
·	
34. Explain the arrangements of proteins in the cell membrane.	
(or)	
Write the equations involved in the conversion of glucose – 6 – phosphate to D –	Ribose
5 phosphates in HMP shunt.	
35. Explain the action of enzymes present in the small intestine to hydrolyse the	
carbohydrates.	
(or)	
Write a note on synthesis of Lecithin.	
36. What is meant by transamination? Explain with suitable examples .	
(or)	
Explain Non competitive inhibition with suitable diagram.	
37. Explain Phagocytosis. (or)	
Write about the cause and pathology of Vonhierke's disease.	
38. What is the role of t RNA in protein synthesis?	
(or)	
How will you prove that ATP is the high energy compound?
