

## Notes Quadrilaterals

A **quadrilateral** is a 4-sided polygon. The sum of the measures of the four angles of any quadrilateral is  $360^\circ$ . Some types of quadrilaterals with which you should be familiar are shown below.

Type	Examples	Properties
Parallelogram		<ul style="list-style-type: none"> <li>● Both pairs of opposite sides are parallel.</li> <li>● Both pairs of opposite sides are congruent.</li> <li>● Both pairs of opposite angles are congruent.</li> <li>● Consecutive angles are supplementary.</li> </ul>
Rectangle		<ul style="list-style-type: none"> <li>● Both pairs of opposite sides are parallel.</li> <li>● Both pairs of opposite sides are congruent.</li> <li>● All pairs of adjacent sides are perpendicular.</li> <li>● All angles are right angles.</li> </ul>
Rhombus		<ul style="list-style-type: none"> <li>● Both pairs of opposite sides are parallel.</li> <li>● All sides are congruent.</li> <li>● Both pairs of opposite angles are congruent.</li> <li>● Consecutive angles are supplementary.</li> </ul>
Square		<ul style="list-style-type: none"> <li>● Both pairs of opposite sides are parallel.</li> <li>● All sides are congruent.</li> <li>● All pairs of adjacent sides are perpendicular.</li> <li>● All angles are right angles.</li> </ul>
Trapezoid		<ul style="list-style-type: none"> <li>● Exactly one pair of opposite sides is parallel.</li> <li>● Exactly two pairs of consecutive angles are supplementary.</li> </ul>
