

#### Q.1 – 30 Carry One Mark Each.

- 1.If the Carr's index of a power is 10% then the type of powder flow is(A) poor(B) excellent(C) very poor(D)good
- Mixing of semisolids is carried out using
   (A) double cone mixer
   (B) rotating cube mixer
  - (C) planetary mixer (D) fluidized bed mixer
- 3. In the preparation of small pox vaccine, the drying process used is
  - (A) spray drying (B) Vacuum drying
  - (C) drum drying (D) freeze drying
- 4. In cosmetic preparations, an antioxidant used in an aqueous system, is
  - (A) Sodium formaldehyde sulphoxylate (B)  $\alpha$  Tocopherol
  - (C) Methyl paraben
- (D) Phenol
- In the tablet coating process, inadequate spreading of the coating solution before drying causes
  - (A) Orange peel effect
  - (C) Blistering effect

8.

(B) Sticking effect(D) Picking effect

- 6. Presence of one of the following characteristics show that the Rauwolfia serpentine is adulterated with other species of Rauwolfia.
  - (A) Compound starch grains
  - (B) Cluster crystals of calcium oxalate
  - (C) Lignified sclereids (D) Unlignified pericyclic fibres
- 7. Chinese rhapontic rhubarb can be distinguished from Indian rhubarb by fluorescence developed in UV light which is:
  - (A) Deep yellow (B) Deep violet (C) Green (D) Blue
  - Citrus flavonoids are rich in (A) Aesculetin (B) Fraxin (C) Hesperidin (D) Scopoletin
- 9. The quantitative values determined for the identification of leaf drugs remain constant throughout the age of the plant EXCEPT
  - (A) Stomatal number (B) Veinlet termination number
  - (C) Veinislet number (D) Stomatal index

Join **All India Mock GATE Classroom Test Series - 2007** conducted by GATE Forum in over 25 cities all over India. Question Papers including section tests and full tests are designed by IISc alumni according to the latest syllabus. - 10. The alkaloid which inhibits the cholinesterase undergoes hydrolysis in solution to give methyl carbamic acid and eseroline is:
  - (A) Scopolamine

(B) Pyridostigmine

(C) Neostigmine

(D) Physostigmine

- 11. Luminescence is the term applied to
  - (A) absorbed radiation
  - (B) re-emission of previously absorbed radiation
  - (C) excited radiation
  - (D) transmitted radiation
- 12. Polarogram of a solution containing an electro-reducible substance is obtained by plotting
  - (A) Current Vs Volume

- (B) Current Vs Potential
- (C) Resistance Vs Time (D) Potential Vs Volume
- Silica gel used in most of the adsorbent columns contains OH groups. So it is
   (A) Basic
   (B) Neutral
   (C) Acidic
  - (D) Both acidic and basic
- ATEForum

#### 14. The electronic transition possible in $Br_2$ is:

- (A)  $\sigma \sigma^*$  (B)  $\sigma \sigma^*$  and  $n \sigma^*$
- (C)  $\sigma \pi^*$  and  $\pi \pi^*$  (D)  $n \pi^*$  and  $\sigma \pi^*$
- 15. Ferrous ion is very weakly coloured for calorimetric analysis. It can be converted into a highly coloured complex using
  - (A)  $H_2SO_4$  (B) PDAB
  - (C) Thymol blue (D) 1:10 Phenanthroline
- 16. Prazepam, Oxazepam, Clonazepam are structurally similar and have the system
  - (A) 5H-Dibenz(b,f)azepine (B) 1,2,4 Benzothiadiazine
  - (C) Benzodiazepine (D) Phenothiazine
- 17. 11 β, 21-Dihydroxypregn-4 ene-3,18,20-trione is
   (A) Aldosterone
   (B) Progesterone
   (C) Cholesterol
   (D)Cortisone

Join **All India Mock GATE Classroom Test Series - 2007** conducted by GATE Forum in over 25 cities all over India. Question Papers including section tests and full tests are designed by IISc alumni according to the latest syllabus. Percentile, All India Rank, interaction with IISc alumni in our online discussion forums, and more. For more details, visit

- 18. 4, 7 Dichloroquinoline on treatment with 4-amino phenol gives
  - (A) 7-chloro-2-(2-hydroxy phenyl amino) quinoline
  - (B) 7-chloro-4-(4-amino phenyl amino) quinoline
  - (C) 7-chloro-4-(4-hydroxy phenyl amino) quinoline
  - (D) 4-chloro-7-(4-hydroxy phenyl amino) quinoline
- 19. Eegonine, a hydrolytic product of cocaine on treatment with chromium trioxide gives a keto acid, which on thermal decarboxylation results in
  - (A) Atropic acid (B) Tropic acid (C) Pseudo cocaine (D) Tropinone
- A natural product derivative developed as an antimalarial is
   (A) Artemether
   (B) Paludrine
   (C) Pyrimethamine (D) Haloffantrine
- 21. 'Ternary complex' refers to the state when
  - (A) an enzyme forms a covalent complex with its substrate
  - (B) an enzyme forms a non-covalent complex with either a substrate or a product
  - (C) an enzyme that catalyses a reaction with two or more substrates, is concurrently complexed with both substrates.
  - (D) an enzyme complexed to a product, just after catalysis
- 22. The most important clue that helped in the determination of the double helical structure of DNA came from
  - (A) Chargaffs rules
  - (B) Hershey-Chase experiment
  - (C) A very MacLeod McCarty experiment
  - (D) Nirenberg and Khorana's codon assignments.
- 23. Diversity in antibody molecules is brought about by
  - (A) Post-translational modifications (B) Gene rearrangements
  - (C) Usage of special genetic codes
  - (D) Multiple mutations in the polypeptide
- 24. The etiological agent of infectious mononucleosis, also associated with a form of Burkitt's lymphoma is:
  - (A) Varicella Zoster Virus

(B) Epstein Barr Virus

(C) Picorna Virus

(D) Papovavirus

- 34. Phenoxybenzamine can be prepared from
  - (A) Phenol and Propylene oxide (B
  - (C) Phthalic anhydride

- (B) 3-phenyl propanol
- (D)  $\beta$ -phenyl succinic acid
- 35. Glycyrrhizin, a sweet principle of liquorice is
  - (A) K and Mg salts of glycyrrhizinic acid
  - (B) Na and Mg salts of glycyrrhetinic acid
  - (C) K and Ca salts of glycyrrhizinic acid
  - (D) Na and Ca salts of glycyrrhetinic acid
- 36. Alloploids are polyploids derived from
  - (A) a single parental species genome
  - (B) more than one parental species genomes
  - (C) a plant with haploid number of chromosomes
  - (D) a plant with diploic number of chromosomes
- 37. The most effective method of producting virus-free plants is:
  - (A) Root culture
     (B) Meristem culture
     (C) Somatic embryogenesis
     (D) Floriculture
- 38. A person taking orgainic nitrate has to avoid one of the following drugs as it can cause severe hypotension

(A) Aspirin (B) Cholestyramine (C) Warfarin (D) Sildenafil

- 39. To avoid lithium toxicity, a patient using lithium carbonate for mood disorders should not be prescribed
  - (A) Acetazolamide (B) Hydrochlorthiazide
  - (C) Mannitol (D) Porpranolol
- 40. A selective serotonin reuptake inhibitor used as an antidepressant is(A) Venlafaxine(B) Selegiline(C) Phenelzine(D) Amoxapine
- 41. A patient receiving Digoxin for CCF is found to have elevated serum cholesterol. Which hypolipidemic agent should not be prescribed?

(A) Clofibrate (B) Cholestyramine (C) Lovastatin (D) Niacin

- 42. In the study of enzyme kinetics,  $V_{max}$  is said to be attained when
  - (A) there is an excess of free enzyme as compared to the substrate

Join **All India Mock GATE Classroom Test Series - 2007** conducted by GATE Forum in over 25 cities all over India. Question Papers including section tests and full tests are designed by IISc alumni according to the latest syllabus. Percentile, All India Rank, interaction with IISc alumni in our online discussion forums, and more. For more details,

- (B) virtually all of the enzyme is present as the enzyme-substrate complex and concentration of the free enzyme is vanishingly small
- (C) the maximum velocity of the reaction in the presence of low substrate concentration
- (D) when the concentration of free enzyme equals that of the enzyme-substrate complex
- 43. Serum sample of a patient shows elevated levels of  $\gamma$  glutamyl transferase. The patient could be suffering from
  - (A) Kidney disorder

- (B) Liver disease
- (C) Parkinson's disease
- (D) Myocardial infraction
- 44. Acidfast organisms are seen in the sputum of a 48-year old alcoholic man. A test to confirm whether he needs long term multi-drug treatment for tuberculosis is:
  - (A) Chest X-ray
  - (B) Ziehel-Neelsen stain of the sputum
  - (C) Sputum cytology
  - (D) Mycobacterial cultures of the sputum
- 45. The distinguishing features in IR spectra between propionaldehyde and acetone is (A) Weak-CH stretching and out of plane bending in propionaldehyde
  - (B) Keto group in acetone
  - (C) Two methyl groups in acetone
  - (D) CH<sub>2</sub> group in pionaldehyde

#### 46. Nephelometric measurements are most sensitive for

- (A) Clear solution (B) Concentrated solution
- (C) Thick suspensions (D) Very dilute suspensions
- 47. The number of peaks shown by diethyl ether in an NMR spectrum are(A) Four(B) Two(C) One(D) Five
- 48. The half-life for a zero order reaction is calculated using (A)  $t_{\frac{1}{2}} = 0.693/k$  (B)  $t_{\frac{1}{2}} = 2.303/k$  (C)  $t_{\frac{1}{2}} = 1/ak$  (D)  $t_{\frac{1}{2}} = a/2k$
- 49. The biological half-life of procaine in a patient was 35 minutes and its volume of distribution was estimated to be 60 L. The total clearance rate of Procaine is
  (A) 1.188L/min
  (B) 0.115L/min
  (C) 11.5L/min
  (D) 5.75L/min

50. The ratio of the void volume to the bulk volume of the packing of the powder is called as

(A)	Porosity	(B) True density
(C)	Granular density	(D) Bulk density

- 51. A co-solvent used in the preparation of parenteral products is:
  - (A) Benzyl alcohol (B) Methyl alcohol
  - (C) Dimethyl acetamide (D) Phenol

## Q.52-58 are multiple selection items. P, Q, R, S are the options. Two of these options are correct. Choose the correct combination among A, B, C and D.

- 52. In mass spectroscopy, positively charged ions can be produced by
  - (P) Heating of the sample
  - (Q) Bombarding the sample with high energy electrons
  - (R) Bombarding the sample with high energy protons
  - (S) Chemical ionization
  - (A) Q, S (B) Q, R (C) P, R (D) P, S (D) P, S
- 53. A plastisizer and a high boiling point solvent used in the preparation of nial lacquers are

(P) B	Sutyl stearate	(Q) Ethyl lactate	(R) Ethyl alcohol	(S) Acetone
(A) P	, Q	(B) Q, S	(C) R, S	(D)Q, R

- 54. Two of the following attributes are true for describing the mechanism of action of Thiabendazole.
  - (P) Neuromuscular blocking causing spastic paralysis
  - (Q) Blocks the response of the Ascaris muscle to ACH, causins flaccid paralysis in the worms
  - (R) Inhibits the Helminth specific enzyme fumarate reductase
  - (S) Arrest nematode cell divisions in metaphase by interfering with microtubule assembly
  - (A) P, Q (B) R, S (C) Q, S (D)Q, R
- 55. The colour and flavour of Saffron are due to --
  - (P) Crocin
    (Q) Crocetin
    (R) Safranal
    (S) Crepenyic acid
    (A) R, S
    (B) P, R
    (C) Q, S
    (D) Q, P

56. Predict the two impurities which are likely to be present in Glipizide

- (P) 5-methyl-N-[2-(4-sulphamoyl phenyl) enthyl] pyrazine-2-carboxamide.
- (Q) 5-methyl-N-[2-(2-sulphamoyl phenyl) enthyl] pyrazine-2-carboxamide.
- (R) Cyclohexanamine
- (S) Cyclohexane
- (A) P, R (B) P, Q (C) R, Q (D) R, S
- 57. Calcipotriene, a synthetic Vitamin D<sub>3</sub> analogue has the following attributes
  - (P) Pronounced antirachitic activity
  - (Q) Inhibits epidermal cell proliferation and enhances cell differentiation
  - (R) Used as a topical application in the treatment of moderate plaque psoriasis
  - (S) Effect on calcium metabolism is 200 times more than Ergocalciferol
  - (A) Q, R (B) P, Q (C) R, S (D)Q, S
- 58. Insulin when released from the pancreatic  $\beta$  cells
  - (P) Can sequester blood glucose by forming a complex with it.
  - (Q) gets fully conjugated with glucuronic acid immediately, to be released upon suitable stimuli in normal health.
  - (R) Acts on the transporter molecules to facilitate glucose movement across the cell membranes.
  - (S) Increases storage of glucose to glycogen in the liver.
  - (A) P, R (B) R, S (C) P, S (D)Q, S

# **Q.59-65** ARE "MATCHING" exercises. Match Group I with Group II. Choose the correct combination among the alternatives A, B, C and D. 59.

Group I Drugs	Group II Titrants used in IP assays
(P) Ascorbic acid	(1) TBAH
(Q) Pyridoxine HCI	(2) Iodine
(R) Dapsone	(3) HCIO <sub>4</sub>
(S) Fluorouracil	(4) Sodium nitrite

(A) P - 1	Q - 4 R - 3	S - 2	(B) P - 2 Q - 3 R - 4 S - 1
(C) P - 4	Q - 2 R - 1	S - 3	(D) P - 3 Q - 2 R - 4 S - 1

Data for Q.66 – 80 are based on the statement/problem. Choose the correct answer for each question from among the options A, B, C and D. Common data for questions 66 and 67:

A sample of *Cinnamomum zeylanicum* purchased from the market was evaluated for its authenticity.

66. It shows

(A) presence of cork and cortex
(B) absence of cork and cortex
(C) absence of phloem fibres

67. Volatile oil should not be less than

(A) 0.05%
(B) 0.20%
(C) 0.50%
(D) 1.00%

#### Common data for questions 68, 69 and 70:

Chloroacetic acid and hydrazine are treated together with X to get semicarbazido acetic acid in which ring closure takes place to 1-amino hydantoin. It is subsequently treated with 2-diacetoxy methyl-5-nitrofuran to get Nitrofurantoin.

- 68. Reagetn 'X' is
  - (A) Cuprous chlodride
  - (C) Silver nitrate

ATE Forum (B) Potassium cyanate (D) Mercurous chloride

#### 69. Its IUPAC name is

- (A) 1-(5-nitrofurfuryl) hydantoin
- (B) 1-(5-nitrofurfurylidene hydroxyl)hydantoin
- (C) 1-(5-nitrofurfurylidine amino) hydantoin
- (D) 1-(5-aminfurfurylidine nitro) dydantoin
- 70. Its gastrointestinal tolerance can be improved without interfering with oral absorption by preparing a
  - (A) solid dispersion (B) prodrug
  - (C) large crystalline form (Macrodantin) (D) suspension

#### Common data for questions 71 and 72:

A compound 'X' with molecular formula  $C_2H_4O$  exhibits a strong absorption band at 1730 cm<sup>-1</sup> in IR spectrum. On reduction, it is converted into 'Y' which shows a strong band at 3640cm<sup>-1</sup>.

- 71. Assign the band in X to
  - (A)  $CH_3$  (B) C = C

(C) C = 0

 $(D)CH_2C=O$ 

Join **All India Mock GATE Classroom Test Series - 2007** conducted by GATE Forum in over 25 cities all over India. Question Papers including section tests and full tests are designed by IISc alumni according to the latest syllabus. Percentile, All India Rank, interaction with IISc alumni in our online discussion forums, and more. For more details, visit

- 72. The strong band in Y is due to
  - (A) -C C (B) -C O C (C)  $= CH_2$  (D) OH

#### Common data for questions 73, 74 and 75:

In the management of asthma, the drugs used are Salmeterol, Zafirlukast, Budesonide, Nedocromil sodium and Bambuterol.

- 73. Zafirlukast acts as
  - (A)  $\beta_2$  adrenoceptor agonist
  - (B) Cysteinyl-leukotriene receptor antagnoist
  - (C) uscarinic receptor antagonist
  - (D) Antihistamine
- 74. A prodrug of terbutaline is
  - (A) Zafirlukast

(B) Salmeterol

(C) Bambuterol

- (D) Nedocromil sodium
- 75. Warfarin interacts with this antiasthmatic drug and increases prothrombin time (A) Budesonide (B) Zafirlukast (C) Salmeterol (D)Bambuterol

#### Common data for questions 76, 77 and 78:

In a pharmaceutical industry, batch filtration of liquids where the proportion of solids to liquids is high is to be carried out. The complete recovery of solids is required. After filtration, the filtrate, which is corrosive, gives a crystalline product on evaporation. The liquid tends to deposit scales or crystals on the heating surface during evaporation.

- 76. A suitable filtration equipment is
  - (A) Plate and frame filter press (B) Leaf filters
  - (C) Meta filters

- (D) Membrane filters
- 77. The filter aid used in the above filtration is
  - (A) Sand
  - (C) Activated carbon

- (B) Nylon fibre cloth
- (D) Filter paper
- 78. A suitable evaporator is
  - (A) falling film evaporator
  - (C) vertical evaporator

- (B) forced circulation evaporator
- (D) horizontal tube evaporator

Join **All India Mock GATE Classroom Test Series - 2007** conducted by GATE Forum in over 25 cities all over India. #### Common data for questions 79 and 80:

Isoprenoid biosynthesis is involved in the production of many biologically important compounds such as Cholesterol, Steriod Hormones, Vitamin K, Vitamin E and bile acids.

- 79. HMG-Co A reductase, a key enzyme in the patway, catalyzes
  - (A) side chain cleavage in the conversion of cholesterol to steroid hormones
  - (B) the reduction of the thio-ester group to an alcohol in mevalonate biosyntheis.
  - (C) the reduction of the hydroxyl group of mevalonate to Vitamin D.
  - (D) steroid condensation reaction in the biosynthesis of bile acids.
- 80. The inhibition of HMG-CoA teductase is a strategy used in the treatment of
  - (A) Familia hyperchlesterolemia (B) Vitamin K deficiency
  - (C) Inflammation in the joints (D) Hepatic parenchymal disease

#### Linked Answer Questions: Q.81a to Q85b Carry Two Marks Each.

### Statement for Linked Answer Questions 81a to 81b:

81.	(A) The selective COX-2 inhibitor is				
	(A) Ketorolac	(B) Rofecoxib	(C) Indomethacin	(D) Naproxen	
	(B) The drug selec	ted is not to be given	, if the patient is alread	ly taking	
	(A) Antiallergic dru	igs	(B) Anxiolytic drug	S	
		1			

(C) Antihypertensive drugs (D) Oral antidiabetic agents

#### Statement for Linked Answer Questions 82a to 82b:

A drug solution has an initial potency of 300 mg/10ml. When stored in a refrigerator for 30 days, its potency was found to be 100 mg/10ml.

- 82. **(A)** The rate constant, assuming that the drug solution undergoes first order kinetics, is:
  - (A)  $0.0366 \text{ day}^{-1}$  (B)  $0.0074 \text{ day}^{-1}$  (C)  $0.0174 \text{ day}^{-1}$  (D)  $0.0506 \text{ day}^{-1}$
  - **(B)** Half-life of the drug solution, under these conditions is:
  - (A) 9.4 days (B) 19 days (C) 47 days (D)4.7 days

Join **All India Mock GATE Classroom Test Series - 2007** conducted by GATE Forum in over 25 cities all over India. Question Papers including section tests and full tests are designed by IISc alumni according to the latest syllabus. Percentile, All India Rank, interaction with IISc alumni in our online discussion forums, and more. For more details, visit

#### Statement for Linked Answer Questions 83a to 83b:

Ginger is a widely used herbal drug, containing many chemical constituents.

83.	(A) The pungent principle present in it, is			
	(A) Zingiberol	(B) Zingiberene	(C) Gingerol	(D)Cineole
	(B) It's decomposition	on product, on boiling v	with 2% KOH is	
	(A) Zingiberone		(B) Shogaol	
	(C) Gingediol		(D) Gingediol aceta	ate

#### Statement for Linked Answer Questions 84a to 84b:

2, 6-dimethyl phenol and chloroacetone on reaction gives 'X', which on treatment with hydroxylamine and hydrochloric acid gives an intermediate product. This on further treatment with Raney nickel in acid, gives the final product.

 $\bigcirc$ ....

84.	(A) The product 'X' is: $(ATEForum)$
	(A) 1-(2, 6-Dimethyl phenoxy)-2-propanone
	(B) 1-(2, 6-Dimethyl phenoxy)-2-butanone
	(C) 1-(2, 6-Dimethyl phenoxy)-2-isopropanone

- (D) 1-(2, 6-Dimethyl phenoxy)-2-pentanone
- (B) The final product is
- (A) 1-methyl-2-(2, 6-xylyloxy)isopropylamine
- (B) 1-methyl-2-(2, 6-xylyloxy)ethylamine
- (C) 1-methyl-2-(2, 6-xylyloxy)butylamien
- (D) 1-methyl-2-(2, 6-xylyloxy)pentylamine

#### Statement for Linked Answer Questions 85a to 85b:

An organic compound 'X' has an absorption maxima at 217 nm. Its  $\varepsilon_{max}$  is 16,000. the absorbance is 0.64 when the cell length is 1 cm.

85. **(A)** The molar concentration of 'X' is

(A)  $5 \times 10^{-5}$  (B)  $4 \times 10^{-5}$  (C)  $4 \times 10^{-4}$  (D)  $5 \times 10^{-2}$ 

**(B)** If the molecular weight is 56.06, its concentration in gms/ml is:

(A)  $2.5 \times 10^{-6}$  (B)  $0.25 \times 10^{-6}$  (C)  $5 \times 10^{-5}$  (D)  $2.24 \times 10^{-6}$
