## Gas Laws and Mole Concept

## Properties of gases

- Each gas contains a large number of minute particles called molecules.
- The volume of a gas molecule is very less when compared to the total volume of the gas.
- The molecules of a gas are in a state of rapid random motion in all directions.
- During this motion, the gas molecules collide with each other and also collide with the walls of the container in which it is kept.
- As the collisions of molecules are perfectly elastic in nature, there is no loss of energy.
- The collision of the gas molecules with the walls of the container creates the pressure of the gas.
- The force of attraction between the gas molecules is comparatively less.
- Energy of gas molecules is very high
- Distance between the molecules is very large
- Freedom of movement of molecules very high
- Attractive force between molecules and with the walls of the container is very low.

## Volume of a gas

If a gas ,kept in a cylinder having a volume of 1 litre, is completely transferred to another 5 litre cylinder, its volume becomes 5 litres.
Volume of a gas is the volume of the container which it occupies.

1. Pull the piston of a syringe backwards. Press the piston after closing the nozzle of the syringe.

What will happen to the volume of air inside the syringe?
When we press the piston after closing its nozzle, the volume of the gas inside the syringe decreases.

## Temperature of a gas

When a gas is heated , the temperature increases. The kinetic energy of the molecules increases. The average kinetic energy is a measure of the temperature of a gas.

## Pressure of a gas

Force exerted per unit area is called pressure.
Force on unit area= Total force exerted on the surface / Surface area

## Relation between Volume of a gas and Pressure <br> (Boyle's Law)

2.The size of the air bubbles rising from the bottom of an aquarium increases. Give reason.
Here the temperature is constant. From bottom to top, the external pressure decreases.
Hence volume of the bubble increases. (Boyle's law).

Boyle's law states that at a constant temperature, volume of a definite mass of gas is inversely proportional to its pressure. If $P$ is the pressure and $V$ the volume, then $P \times V$ is a constant.

## Relation between Volume of a gas and its Temperature (Charle's Law)

3. Take a dry bottle (an injection bottle) having a rubber stopper. Fix an empty refill through the rubber stopper. Fill a drop of ink into in the lower end of the refill tube, then close the bottle. Dip this arrangement in luke warm water.

What do you observe?
The ink rises up.
What is the reason for the rising of the ink upwards?
When the temperature increases, the volume of the gas inside the bottle
increases. This will push the ink up .
What did you observe on cooling the bottle after taking it out? Why?
On cooling the bottle, the volume of the gas decreases. Then the ink goes down.
When the temperature increases, the volume of the gas increases. When temperature decreases, volume of the gas decreases.
The table given below shows the relation between volume and temperature of a fixed mass of a gas.
(Pressure is kept constant)

| Volume V | Temperature T (In Kelvin scale) | V/T |
| :---: | :---: | :---: |
| 900 mL | 300 K | $900 / 300=\mathbf{3}$ |
| 960 mL | 320 K | $960 / 320=\mathbf{3}$ |
| 819 mL | 273 K | $819 / 273=\mathbf{3}$ |

[Note that the temperature is stated in kelvin scale]
Charle's law states that, At constant pressure, the volume of a definite mass of a gas is directly proportional to the temperature in Kelvin Scale.

If V is volume and $T$ the temperature, Then V/T will be a constant.
4. If an inflated balloon is kept in sunlight, it will burst. What may be the reason for this?

When the temperature increases, the volume of the gas inside the balloon increases and finally it will burst. (Charle's Law)

```
Relation between volume and number of molecules
(Avogadro's Law)
```

Avogadro's Law states that At constant temperature and pressure, the volume of a gas is directly proportional to the number of molecules.
5. How is the number of minute particles calculated?

If the particles having the same size and mass, even though they are in crores, we can determine their accurate number on the basis of mass.

## Relative Atomic Mass

It is possible to find out the accurate mass of minute particles through the modern techniques.

For example, the mass of a Hydrogen atom is $1.67 \times 10^{-24} \mathrm{~g}$. But in practice, it is stated in terms of relative mass.

In this method, the mass of an atom is compared to the mass of another atom and expressed as a number which shows how many times it is heavier than the other atom. The atomic mass of elements are expressed by considering 1/12 mass of an atom of carbon-12 as one unit.

When average atomic masses of elements are calculated taking into account the different isotopes of elements, the atomic masses of elements may have fractional values. However for practical purposes and calculations, most of these values are taken as whole numbers.

## Towards mole concept..

If the relative atomic mass of an element is $x$ grams, $x$ grams of it contains $6.022 \times 10^{23}$ atoms .

Look at the following table for clarification

| Element | Atomic Mass | Atomic Mass in grams | Mass Actually taken | Number of Atoms |
| :---: | :---: | :---: | :---: | :---: |
| Hydrogen | 1 | 1 g | 1 g | $6.022 \times 10^{23}$ |
| Carbon | 12 | 12 g | 12 g | $6.022 \times 10^{23}$ |
| Nitrogen | 14 | 14 g | 14 g | $6.022 \times 10^{23}$ |
| Oxygen | 16 | 16 g | 16 g | $6.022 \times 10^{23}$ |
| Sodium | 23 | 23 g | 23 g | $6.022 \times 10^{23}$ |
| Magnesium | 24 | 24 g | 24 g | $6.022 \times 10^{23}$ |
| Aluminium | 27 | 27 g | 27 g | $6.022 \times 10^{23}$ |
| Chlorine | 35.5 | 35.5 g | 35.5 g | $6.022 \times 10^{23}$ |
| Calcium | 40 | 40 g | 40 g | $6.022 \times 10^{23}$ |

The mass of an element in grams equal to its atomic mass is called 1 Gram Atomic Mass (1 GAM) of the element. This may also be shortened as 1 Gram Atom.
Hence the table given above can be modified as

| Element | Atomic <br> Mass | Atomic Mass in grams | Mass Actually taken | GAM | Number of Atoms |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Hydrogen | $\mathbf{1}$ | $\mathbf{1} \mathbf{g}$ | $\mathbf{1} \mathbf{g}$ | $\mathbf{1}$ GAM | $6.022 \times 10^{23}$ |
| Carbon | $\mathbf{1 2}$ | $\mathbf{1 2} \mathbf{g}$ | $\mathbf{1 2} \mathbf{g}$ | $\mathbf{1}$ GAM | $6.022 \times 10^{23}$ |
| Nitrogen | $\mathbf{1 4}$ | $\mathbf{1 4} \mathbf{g}$ | $\mathbf{1 4} \mathbf{g}$ | $\mathbf{1}$ GAM | $6.022 \times 10^{23}$ |
| Oxygen | $\mathbf{1 6}$ | $\mathbf{1 6} \mathbf{g}$ | $\mathbf{1 6} \mathbf{g}$ | $\mathbf{1}$ GAM | $6.022 \times 10^{23}$ |
| Sodium | $\mathbf{2 3}$ | $\mathbf{2 3} \mathbf{g}$ | $\mathbf{2 3} \mathbf{g}$ | $\mathbf{1}$ GAM | $6.022 \times 10^{23}$ |
| Magnesium | $\mathbf{2 4}$ | $\mathbf{2 4} \mathbf{g}$ | $\mathbf{2 4} \mathbf{g}$ | $\mathbf{1}$ GAM | $6.022 \times 10^{23}$ |
| Aluminium | $\mathbf{2 7}$ | $\mathbf{2 7} \mathbf{g}$ | $\mathbf{2 7} \mathbf{g}$ | $\mathbf{1}$ GAM | $6.022 \times 10^{23}$ |
| Chlorine | $\mathbf{3 5 . 5}$ | $\mathbf{3 5 . 5 g}$ | $\mathbf{3 5 . 5 g}$ | $\mathbf{1}$ GAM | $6.022 \times 10^{23}$ |
| Calcium | $\mathbf{4 0}$ | $\mathbf{4 0} \mathbf{g}$ | $\mathbf{4 0} \mathbf{g}$ | $\mathbf{1}$ GAM | $6.022 \times 10^{23}$ |

One gram atomic mass (1 GAM) of any element contains 6.022x10 ${ }^{23}$ atoms. This number is known as Avagadro number. This is indicated as $\boldsymbol{N}_{A}$.

Have a close look at the table given below

| Element | Atomic <br> Mass | Atomic Mass in grams | Given mass | $\begin{aligned} & \text { Number } \quad \text { of } \\ & \text { GAM } \end{aligned}$ | Number of Atoms |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Hydrogen | 1 | 1 g | 1 g | 1 GAM | $6.022 \times 10^{23}$ |
| Hydrogen | 1 | 1 g | 2 g | 2 GAM | $2 \times 6.022 \times 10^{23}$ |
| Carbon | 12 | 12 g | 12 g | 1 GAM | $6.022 \times 10^{23}$ |
| Carbon | 12 | 12 g | 24 g | 2 GAM | $2 \times 6.022 \times 10^{23}$ |
| Nitrogen | 14 | 14 g | 14 g | 1 GAM | $6.022 \times 10^{23}$ |
| Nitrogen | 14 | 14 g | 42 g | 3 GAM | $3 \times 6.022 \times 10^{23}$ |
| Oxygen | 16 | 16 g | 16 g | 1 GAM | $6.022 \times 10^{23}$ |
| Oxygen | 16 | 16 g | 80 g | 5 GAM | $5 \times 6.022 \times 10^{23}$ |
| Sodium | 23 | 23 g | 23 g | 1 GAM | $6.022 \times 10^{23}$ |
| Sodium | 23 | 23 g | 230 g | 10 GAM | $10 \times 6.022 \times 10^{23}$ |

From the table given above, it is clear that

## Number of Gram Atomic Mass $=$ Given Mass in grams / GAM of element

6. How many GAM is present in 46 g of sodium?
(Hint: 1 GAM of sodium means 23 grams of Sodium)
Answer:
Number of GAM $=$ Given Mass in grams / GAM of element $=46 \mathrm{~g} / 23 \mathrm{~g}$
$=2$
It contains $2 \times 6.022 \times 10^{23}$ atoms of sodium
7.How many GAM is present in 69 g of sodium?
(Hint: 1 GAM of sodium means 23 grams of Sodium)
Answer:
Number of GAM = Given Mass in grams / GAM of element
$=69 \mathrm{~g} / 23 \mathrm{~g}$
$=3$
It contains $3 \times 6.022 \times 10^{23}$ atoms of sodium
Number of Atoms $=$ Number of GAM x $6.022 \times 10^{23}$
8.Calculate the number of atoms present in each of the sample?
(Atomic mass $\mathrm{N}=14, \quad \mathrm{O}=16$ )
a) 42 g Nitrogen
b) 80 g Oxygen

Answer:
a) 42 g Nitrogen

Number of GAM $=$ Given Mass in grams / GAM of element

$$
\begin{aligned}
& =\quad 42 \mathrm{~g} / \mathbf{1 4} \mathrm{g} \\
& =\quad \mathbf{3}
\end{aligned}
$$

It contains $3 \times 6.022 \times 10^{23}$ atoms of Nitrogen
b) 80 g Oxygen

Number of GAM $=$ Given Mass in grams / GAM of element

$$
=\quad 80 \mathrm{~g} / \mathbf{1 6} \mathrm{g}
$$

$$
=5
$$

It contains $5 \times 6.022 \times 10^{23}$ atoms of Oxygen
9.Complete the table given below.

| Element | $\begin{array}{\|l} \text { Atomic } \\ \text { Mass } \end{array}$ | Atomic Mass in grams | Given mass | $\begin{aligned} & \text { Number } \quad \text { of } \\ & \text { GAM } \end{aligned}$ | Number of Atoms |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Hydrogen | 1 | 1 g | 4 g | ........(a)........ | .........(b).......... |
| Carbon | 12 | 12 g | .........(c)......... | 5 GAM | ..........(d).......... |
| Nitrogen | 14 | 14 g | 42 g | ........(e)........ | ..........(f).......... |
| Oxygen | 16 | 16 g | ........(g)......... | ........(h) <br> h)......... | $5 \times 6.022 \times 10^{23}$ |

(a) $=4$
(b) $=4 \times 6.022 \times 10^{23}$
(c) $=60 \mathrm{~g}$
(d) $=5 \times 6.022 \times 10^{23}$
(e) $=3$
(f) $=3 \times 6.022 \times 10^{23}$
$(\mathrm{g})=80 \mathrm{~g}$
(h) $=5$

## One mole of atoms

## One mole of atoms $=6.022 \times 10^{23}$ atoms $=1 \mathrm{GAM}$

10. Find the number of mole atoms of the following
a.

| Element | Atomic <br> Mass | Atomic <br> mass in <br> grams | Mass <br> taken | Number <br> of GAM | Number of <br> atoms | Number of mole <br> atoms |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Hydrogen | $\mathbf{1}$ | $\mathbf{1} \mathbf{g}$ | $\mathbf{1} \mathbf{g}$ | $\mathbf{1}$ GAM | $6.022 \times 10^{23}$ |  |
| Carbon | $\mathbf{1 2}$ | $\mathbf{1 2} \mathbf{g}$ | $\mathbf{1 2} \mathbf{g}$ | $\mathbf{1}$ GAM | $6.022 \times 10^{23}$ |  |
| Nitrogen | $\mathbf{1 4}$ | $\mathbf{1 4} \mathbf{g}$ | $\mathbf{1 4} \mathbf{g}$ | $\mathbf{1}$ GAM | $6.022 \times 10^{23}$ |  |
| Oxygen | $\mathbf{1 6}$ | $\mathbf{1 6} \mathbf{g}$ | $\mathbf{1 6} \mathbf{g}$ | $\mathbf{1}$ GAM | $6.022 \times 10^{23}$ |  |

Answer:

| Element | Atomic <br> Mass | Atomic <br> mass in <br> grams | Mass <br> taken | Number <br> of GAM | Number of <br> atoms | Number of mole <br> atoms |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Hydrogen | $\mathbf{1}$ | $\mathbf{1} \mathbf{g}$ | $\mathbf{1} \mathbf{g}$ | $\mathbf{1}$ GAM | $6.022 \times 10^{23}$ | 1 |
| Carbon | $\mathbf{1 2}$ | $\mathbf{1 2} \mathbf{g}$ | $\mathbf{1 2} \mathbf{g}$ | $\mathbf{1}$ GAM | $6.022 \times 10^{23}$ | 1 |
| Nitrogen | $\mathbf{1 4}$ | $\mathbf{1 4} \mathbf{g}$ | $\mathbf{1 4} \mathbf{g}$ | $\mathbf{1}$ GAM | $6.022 \times 10^{23}$ | 1 |
| Oxygen | $\mathbf{1 6}$ | $\mathbf{1 6} \mathbf{g}$ | $\mathbf{1 6} \mathbf{g}$ | $\mathbf{1}$ GAM | $6.022 \times 10^{23}$ | 1 |

b.

| Element | Atomic mass | Atomic mass in grams | Given mass | Number of GAM | Number of atoms | Number of mole atoms |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Hydrogen | 1 | 1 g | 1 g | 1 GAM | $6.022 \times 10^{23}$ |  |
| Hydrogen | 1 | 1 g | 2 g | 2 GAM | $2 \times 6.022 \times 10^{23}$ |  |
| Carbon | 12 | 12 g | 12 g | 1 GAM | $6.022 \times 10^{23}$ |  |
| Carbon | 12 | 12 g | 24 g | 2 GAM | $2 \times 6.022 \times 10^{23}$ |  |
| Nitrogen | 14 | 14 g | 14 g | 1 GAM | $6.022 \times 10^{23}$ |  |
| Nitrogen | 14 | 14 g | 42 g | 3 GAM | $3 \times 6.022 \times 10^{23}$ |  |
| Oxygen | 16 | 16 g | 16 g | 1 GAM | $6.022 \times 10^{23}$ |  |
| Oxygen | 16 | 16 g | 80 g | 5 GAM | $5 \times 6.022 \times 10^{23}$ |  |
| Sodium | 23 | 23 g | 23 g | 1 GAM | $6.022 \times 10^{23}$ |  |
| Sodium | 23 | 23 g | 230 g | 10 GAM | $10 \times 6.022 \times 10^{23}$ |  |

Answer:

| Element | Atomic mass | Atomic mass in grams | Given mass | Number of GAM | Number of atoms | Number of mole atoms |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Hydrogen | 1 | 1 g | 1 g | 1 GAM | $6.022 \times 10^{23}$ | 1 |
| Hydrogen | 1 | 1 g | 2 g | 2 GAM | $2 \times 6.022 \times 10^{23}$ | 2 |
| Carbon | 12 | 12 g | 12 g | 1 GAM | $6.022 \times 10^{23}$ | 1 |
| Carbon | 12 | 12 g | 24 g | 2 GAM | $2 \times 6.022 \times 10^{23}$ | 2 |
| Nitrogen | 14 | 14 g | 14 g | 1 GAM | $6.022 \times 10^{23}$ | 1 |
| Nitrogen | 14 | 14 g | 42 g | 3 GAM | $3 \times 6.022 \times 10^{23}$ | 3 |
| Oxygen | 16 | 16 g | 16 g | 1 GAM | $6.022 \times 10^{23}$ | 1 |
| Oxygen | 16 | 16 g | 80 g | 5 GAM | $5 \times 6.022 \times 10^{23}$ | 5 |
| Sodium | 23 | 23 g | 23 g | 1 GAM | $6.022 \times 10^{23}$ | 1 |
| Sodium | 23 | 23 g | 230 g | 10 GAM | $10 \times 6.022 \times 10^{23}$ | 10 |

## Molecular Mass and Gram Molecular Mass

11.The atomic masses of certain elements are given below.

$$
(H=1, C=12, N=14, O=16, N a=23, S=32)
$$

Find the Molecular Mass and GMM of the following

1. $\mathrm{H}_{2}$
2. $\mathrm{O}_{2}$
3. $\mathrm{N}_{2}$
4. $\mathrm{H}_{2} \mathrm{O}$
5. $\mathrm{NH}_{3}$
$6 . \mathrm{CO}_{2}$ 7. NaOH
6. $\mathrm{C}_{6} \mathrm{H}_{12} \mathrm{O}_{6}$
7. $\mathrm{Na}_{2} \mathrm{CO}_{3}$
8. $\mathrm{H}_{2} \mathrm{SO}_{4}$

| Sl No | Element/ Compound | Chemical Formula | Molecular Mass | GMM |
| :---: | :---: | :---: | :---: | :---: |
| 1 | Hydrogen, $\mathrm{H}_{2}$ | $\mathrm{H}_{2}$ | $1+1=2$ | 2 g |
| 2 | Oxygen, $\mathrm{O}_{2}$ | $\mathrm{O}_{2}$ | $16+16=32$ | 32 g |
| 3 | Nitrogen , $\mathbf{N}_{2}$ | $\mathbf{N}_{2}$ | $14+14=28$ | 28 g |
| 4 | Water , $\mathrm{H}_{2} \mathrm{O}$ | $\mathrm{H}_{2} \mathrm{O}$ | $1+1+16=18$ | 18 g |
| 5 | Ammonia , $\mathrm{NH}_{3}$ | $\mathrm{NH}_{3}$ | $14+1+1+1=17$ | 17 g |
| 6 | Carbondioxide, $\mathrm{CO}_{2}$ | $\mathrm{CO}_{2}$ | $12+16+16=44$ | 44 g |
| 7 | Sodium hydroxide, NaOH | NaOH | $23+16+1=40$ | 40 g |
| 8 | Glucose, $\mathrm{C}_{6} \mathrm{H}_{12} \mathrm{O}_{6}$ | $\mathrm{C}_{6} \mathrm{H}_{12} \mathrm{O}_{6}$ | $\begin{gathered} (12 \times 6)+(1 \times 12)+(16 \times 6)= \\ 72+12+96=\mathbf{1 8 0} \end{gathered}$ | 180 g |
| 9 | Sodium carbonate, $\mathrm{Na}_{2} \mathrm{CO}_{3}$ | $\mathrm{Na}_{2} \mathrm{CO}_{3}$ | $\begin{gathered} =(23 \times 2)+(12 \times 1)+ \\ (16 \times 3) \\ =46+12+48 \\ =\mathbf{1 0 6} \end{gathered}$ | 106 g |
| 10 | Sulphuric acid, $\mathrm{H}_{2} \mathrm{SO}_{4}$ | $\mathrm{H}_{2} \mathrm{SO}_{4}$ | $\begin{gathered} (1 \times 2)+(32 \times 1)+(16 \times \\ 4) \\ =2+32+64 \\ =\mathbf{9 8} \end{gathered}$ | 98 g |

## Number of Molecules

Analyse the table given below

| Element $/$ Compound | Molecular Mass | Mass in grams | GMM | Number of molecules |
| :--- | :--- | :--- | :--- | :--- |
| Hydrogen $\left(\mathbf{H}_{2}\right)$ | 2 | 2 g | 1 GMM | $6.022 \times 10^{23} \mathrm{H}_{2}$ molecules |
| Oxygen $\left(\mathbf{O}_{2} \mathbf{)}\right.$ | 32 | 32 g | 1 GMM | $6.022 \times 10^{23} \mathrm{O}_{2}$ molecules |
| Nitrogen( $\left.\mathbf{N}_{\mathbf{2}}\right)$ | 28 | 28 g | 1 GMM | $6.022 \times 10^{23} \mathrm{~N}_{2}$ molecules |
| Water $\left(\mathbf{H}_{\mathbf{2}} \mathbf{O}\right)$ | 18 | 18 g | 1 GMM | $6.022 \times 10^{23} \mathrm{H}_{2} \mathrm{O}$ molecules |
| Ammonia( $\mathbf{N H}_{\mathbf{3}} \mathbf{)}$ | 17 | 17 g | 1 GMM | $6.022 \times 10^{23} \mathrm{NH}_{3}$ molecules |
| Carbon dioxide $\left(\mathbf{C O}_{\mathbf{2}}\right)$ | 44 | 44 g | 1 GMM | $6.022 \times 10^{23} \mathrm{CO}_{2}$ molecules |

The amount of a substance in grams equal to its molecular mass is called Gram Molecular Mass

One gram molecular mass of any substance contains Avagadro number of molecules.
12.One GMM oxygen is 32 g Oxygen. This contains $6.022 \times 10^{23}$ oxygen molecules.
(a) How many GMM are there in 64 g oxygen?
(b) How many molecules are present in it?

Answer:
(a) One GMM oxygen is 32g Oxygen.

Hence,
Number of GMM in 64 g oxygen $=64 \mathrm{~g} / 32 \mathrm{~g}$

$$
=2
$$

(b)
$\begin{aligned} \text { Number of molecules in } 64 \mathrm{~g} \text { Oxygen } & =\text { Number of GMM } \times 6.022 \times 10^{23} \\ & =2 \times 6.022 \times 10^{23}\end{aligned}$

$$
=2 \times 6.022 \times 10^{23}
$$

Number of Gram Molecular Mass = Mass given in grams / Gram Molecular Mass (GMM)
13. Calculate the number of GMM and number of ,molecules in each of the following samples
(a) 360 g glucose (Molecular mass $=180$ )
(b) 90 g Water (Molecular mass $=18$ )

Answer:

| (a) $\mathbf{3 6 0} \mathrm{g}$ glucose <br> Number of Gram Molecular Mass | $=$ Mass given in grams / Gram Molecular Mass (GMM) |
| :--- | :--- |
|  | $=360 \mathrm{~g} / 180 \mathrm{~g}$ |
|  | $=2$ |
|  | $=$ Number of GMM $\times 6.022 \times 10^{23}$ |
|  | $=2 \times 6.022 \times 10^{23}$ |
| Number of molecules |  |
| (b) $\mathbf{9 0}$ g glucose |  |
| Number of Gram Molecular Mass | $=$ Mass given in grams / Gram Molecular Mass (GMM) |
|  | $=\mathbf{9 0} \mathrm{g} / 18 \mathrm{~g}$ |
|  | $=5$ |
| Number of molecules | $=$ Number of GMM $\times 6.022 \times 10^{23}$ |
|  | $=5 \times 6.022 \times 10^{23}$ |

## One Mole of molecules

## $6.022 \times 10^{23}$ molecules are called one mole molecule. $1 \mathrm{GMM}=1 \mathrm{Mole}=6.022 \times 10^{23}$ molecules.

$\mathrm{N}_{2}$ is a diatomic molecule. The molecular mass of nitrogen is 28. Look at the word diagram given below.

## Relation between Volume of a gas and Moles

14. What is molar volume of a gas ?

The volume occupied by one mole of a gas is said to be its molar volume.
One mole of any gas under the same conditions of temperature and pressure will contain the same number of molecules and hence their volume will also be the same.

If the temperature or pressure changes, the volume and number of molecules will also change.

Scientists have proved that
1 mole of any gas at 273 K and 1 atm pressure occupies 22.4 litres.

273 K temperature and 1 atm pressure are known as standard temperature and pressure or STP.

That is, at STP one mole of any gas will occupy a volume of 22.4 L. This is called molar volume at STP.

That is ,
One mole of $\mathrm{H}_{2}$ at STP occcupies 22.4 Litres
One mole of $\mathrm{N}_{2}$ at STP occcupies 22.4 Litres
One mole of $\mathrm{O}_{2}$ at STP occcupies 22.4 Litres
One mole of $\mathrm{Cl}_{2}$ at STP occcupies 22.4 Litres
One mole of $\mathrm{CO}_{2}$ at STP occcupies 22.4 Litres
One mole of $\mathrm{NH}_{3}$ at STP occcupies 22.4 Litres
15. If one mole of any gas at STP occupies 22.4 L , find the number of moles in 44.8 L

Answer : 44.8 L/ 22.4 L = 2 mol
16. If one mole of any gas at STP occupies 22.4 L , find the number of moles in 67.2 L

Answer : 67.2 L/ 22.4 L = 3 mol
17. If one mole of any gas at STP occupies 22.4 L , find the number of moles in 112 L

Answer: $112 \mathrm{~L} / 22.4 \mathrm{~L}=5 \mathrm{~mol}$

Number of moles of a gas at STP = Volume of the gas in litres at STP / 22.4 L
18. Complete the chart given below

## Answer:

| Problem Part in a Nutshell |  |  |
| :---: | :---: | :---: |
| For Atoms | For Molecules | For Gases @ STP |
| Number of GAM = Given mass <br> in grams / GAM of the element | Number of GMM = Given mass <br> in grams / GMM | Number of moles of a gas at <br> STP $=$ Volume of the gas at <br> STP in litres / 22.4 litres |
|  |  |  |
| Number of Atoms = Number of <br> GAM $\times 6.022 \times 10^{23}$ | Number of Molecules $=$ Number <br> of GMM $\times 6.022 \times 10^{23}$ | Number of Molecules $=$ <br> Number of moles $\times 6.022 \times 10^{23}$ |

## Let us assess

1. Examine the data given in the table (Temperature and number of molecules of the gas are kept constant).

| Pressure (P) | Volume (V) |
| :---: | :---: |
| 1 atm | 8 L |
| 2 atm | 4 L |
| 4 atm | 2 L |

a) Calculate $\mathrm{P} \times \mathrm{V}$.
b) Which is the gas law related to this?
2. Analyse the situations given below and explain the gas law associated with it.
a) A balloon is being inflated.
b) When an inflated balloon is immersed in water, its size decreases.
3. Certain data regarding various gases kept under the same conditions of temperature and pressure are given below.

| Gas | Volume (L) | No. of molecules |
| :--- | :---: | :---: |
| Nitrogen | 10 L | x |
| Oxygen | 5 L |  |
| Ammonia | 10 L | $\ldots--$ |
| Carbon di oxide | --- | 2 x |

a) Complete the table.
b) Which gas law is applicable here?
4. a) Calculate the mass of $112 \mathrm{LCO}_{2}$ gas kept atSTP (molecular mass $=44$ ).
b) How many molecules of $\mathrm{CO}_{2}$ are present in it?
5. a) Calculate the volume of 170 g of ammonia at STP? (Molecular mass 17)
6. Find out the number of moles of molecules present in the samples given below.
$\left(\mathrm{GMM}-\mathrm{N}_{2}=28 \mathrm{~g}, \mathrm{H}_{2} \mathrm{O}=18 \mathrm{~g}\right)$
a) $56 \mathrm{~g} \mathrm{~N}_{2}$
b) $\quad 90 \mathrm{~g} \mathrm{H}_{2} \mathrm{O}$
7. The Molecular mass of ammonia is 17.
a) How much is the GMM of ammonia?
b) Find out the number of moles of molecules present in 170 g of ammonia.
c) Calculate the number of ammonia molecules present in the above sample of ammonia?
8. The molecular mass of oxygen is 32 .
a) What is the GMM of $\mathrm{O}_{2}$ ?
b) How many moles of molecules are there in 64 g of oxygen? How many molecules are there in it?
c) Calculate the number of oxygen atoms present in 64 g of oxygen?

## Answers:

1
(a) $=8 \mathrm{~L} \mathrm{~atm}$
(b) = Boyle's Law

2
(a) = Avogadro's Law (b) = Boyle's Law (Explanation of the example)

3
(a)

| Gas | Volume (L) | No. of molecules |
| :--- | :---: | :---: |
| Nitrogen | 10 L | x |
| Oxygen | 5 L | $\times / 2$ |
| Ammonia | 10 L | $\times$ |
| Carbon di oxide | 20 L | 2 x |

(b) Avogadro's Law

## 4

(a) Number of moles of a gas at STP

$$
\begin{aligned}
& = \\
& = \\
& = \\
& = \\
& 112 \mathrm{~L} / 22.4 \mathrm{~L} \\
& 5 \text { moles }
\end{aligned}
$$

But , Number of moles = Mass given in grams / Gram Molecular Mass of the compound
Mass in grams = Number of moles $x$ Gram Molecular Mass of the compound $=5 \mathrm{x} 44 \mathrm{~g}$
$=220 \mathrm{~g}$
(b) Number of molecules of $\mathrm{CO}_{2} \quad=$ Number of moles $\times 6.022 \times 10^{23}$
$=5 \times 6.022 \times 10^{23}$
5
Number of moles = Mass given in grams / Gram Molecular Mass of the compound $=170 \mathrm{~g} / 17 \mathrm{~g}$
$=10$ moles

Number of moles of a gas at STP
Volume of the gas in litres at STP / 22.4 L

$$
\begin{aligned}
& =\text { Volume of the gas in litres at STP } / 22.4 \mathrm{~L} \\
& =\text { Number of moles at STP } \times 22.4 \mathrm{~L} \\
& =10 \text { moles } \times 22.4 \mathrm{~L} \\
& =10 \times 22.4 \mathrm{~L}=224 \mathrm{~L}
\end{aligned}
$$

6
(a) $=2$
(b) $=5$

7
(a) 17 g
(b) $170 \mathrm{~g} / 17 \mathrm{~g}=10$
(c) $10 \times \mathrm{N}_{\mathrm{A}}$

8
(a) 32 g
(b) $2,2 \times \mathrm{N}_{\mathrm{A}}$
(c) Number of Oxygen atoms $=$ Number of GAM $\times \mathrm{N}_{\mathrm{A}}$ $=(64 g / 16 \mathrm{~g}) \times \mathrm{N}_{\mathrm{A}}$ $=4 \mathrm{x} \mathrm{N}_{\mathrm{A}}$

## Extended Activities

1. How many grams of Carbon and Oxygen are required to get the same number of atoms as in one gram of Helium?
2. Examine the samples given.
(Molecular mass : $\mathrm{He}=4, \mathrm{NH}_{3}=17, \mathrm{~N}_{2}=28, \mathrm{H}_{2} \mathrm{SO}_{4}=98$, Water $=18$ )
a. 20 g He
b. $44.8 \mathrm{~L} \mathrm{of}^{\mathrm{NH}_{3}}$ at STP
c. 67.2 L of $\mathrm{N}_{2}$ at STP
d. 1 mol Of $\mathrm{H}_{2} \mathrm{SO}_{4}$
e. 180 g of Water
(i)Arrange the samples in the increasing order of number of molecules in each.
(ii) What will be the ascending order of the number of atoms in each ?
(iii)What will be the mass of samples b, c and d
3. In 90 g of Water,
(a) How many molecules are present?
(b) What will be the total number of atoms ?
(c) What will be the total number of electrons in this sample?

## Answers

1. Atomic Mass of Helium $=4$

Number of atoms in 4 grams of Helium $\quad=6.022 \times 10^{23}$
Number of atoms in 1 gram of Helium $\quad=6.022 \times 10^{23} / 4$
Atomic mass of carbon
$=12$
Mass of $6.022 \times 10^{23}$ atoms of carbon $=12 \mathrm{~g}$
Mass of $6.022 \times 10^{23} / 4$ atoms of carbon $=12 \mathrm{~g} / 4$

$$
=3 \mathbf{g}
$$

Atomic mass of oxygen $\quad=16 \mathrm{~g}$
Mass of $6.022 \times 10^{23}$ atoms of oxygen $=16 \mathrm{~g}$
Mass of $6.022 \times 10^{23} / 4$ atoms of oxygen $=16 \mathrm{~g} / 4$

$$
=4 g
$$

## 2. Number of molecules in each sample

## a. 20 g He

Number of GMM = Given mass in grams / GMM of the Element

$$
=20 \mathrm{~g} / 4 \mathrm{~g}=5
$$

Number of Molecules
$=$ Number of GMM x $6.022 \times 10^{23}$
$=5 \times \mathbf{N}_{\mathrm{A}}$

## b. 44.8 L of $\mathrm{NH}_{3}$ at STP

Number of moles of a gas at STP = Volume of the gas at STP in litres / 22.4 litres

$$
=44.8 \mathrm{~L} / 22.4 \mathrm{~L}
$$

$$
=2
$$

Number of molecules $\quad=$ Number of moles $\times 6.022 \times 10^{23}$
$=2 \mathbf{x N} \mathbf{A}$
c. 67.2 L of $N_{2}$ at STP

Number of moles of a gas at STP = Volume of the gas at STP in litres / 22.4 litres
$=67.2 \mathrm{~L} / 22.4 \mathrm{~L}$
$=3$
Number of molecules $\quad=$ Number of moles $\times 6.022 \times 10^{23}$
$=\mathbf{3} \mathbf{X N} \mathbf{N}_{\mathrm{A}}$
d. $1 \mathrm{~mol} \mathrm{Of} \mathrm{H}_{2} \mathrm{SO}_{4}$

Number of molecules
$=$ Number of moles $\times 6.022 \times 10^{23}$
$=1 \times \mathrm{N}_{\mathrm{A}}$
$=\mathbf{N}_{\mathrm{A}}$
e. 180 g of Water

Number of GMM
Number of Molecules

$$
\begin{aligned}
& =\text { Given mass in grams } / \mathrm{GMM} \text { of the compound } \\
& =180 \mathrm{~g} / 18 \mathrm{~g}=10 \\
& =\text { Number of GMM } \times 6.022 \times 10^{23} \\
& =\mathbf{1 0} \mathbf{~ X} \mathbf{N}_{\mathbf{A}}
\end{aligned}
$$

The increasing order of number of molecules in sample is
$1 \mathrm{~mol} \mathrm{Of} \mathrm{H}_{2} \mathrm{SO}_{4}<44.8 \mathrm{~L}$ of $\mathrm{NH}_{3}$ at $\mathrm{STP}<67.2 \mathrm{~L}$ of $\mathrm{N}_{2}$ at STP $<20 \mathrm{~g} \mathrm{He}<180 \mathrm{~g}$ of Water
Number of atoms in each sample

| Sample | Element / Compound | Number of Molecules | Number of Atoms in one Molecule | Total number of atoms |
| :---: | :---: | :---: | :---: | :---: |
| (a) | 20 g He | $5 \times \mathrm{N}_{\mathrm{A}}$ | $\mathrm{He}=1$ | $1 \times 5 \times \mathrm{N}_{\mathrm{A}}=5 \mathbf{N}_{\mathrm{A}}$ |
| (b) | 44.8 L of $\mathrm{NH}_{3}$ at STP | $2 \mathrm{xN} \mathrm{A}_{\text {}}$ | $\mathrm{NH}_{3}=1+3=4$ | $4 \times 2 \mathrm{xN}_{\mathrm{A}}=8 \mathbf{N}_{\mathrm{A}}$ |
| (c) | 67.2 L of $\mathrm{N}_{2}$ at STP | $3 \mathbf{x N}{ }_{\text {A }}$ | $\mathrm{N}_{2}=2$ | $2 \times 3 \mathrm{~N}_{\mathrm{A}}=6 \mathbf{N}_{\mathrm{A}}$ |
| (d) | $1 \mathrm{~mol} \mathrm{Of}_{2} \mathrm{SO}_{4}$ | $\mathbf{N}_{\text {A }}$ | $\mathrm{H}_{2} \mathrm{SO}_{4}=2+1+4=7$ | $7 \times \mathrm{N}_{\mathrm{A}} \quad=7 \mathrm{~N}_{\mathrm{A}}$ |
| (e) | 180 g of Water | $10 \times \mathrm{N}_{\mathrm{A}}$ | Water $\left(\mathrm{H}_{2} \mathrm{O}\right)=2+1=3$ | $3 \times 10 \mathrm{XN}_{\mathrm{A}}=\mathbf{3 0} \mathbf{N}_{\mathrm{A}}$ |

## The ascending order of the number of atoms is

$20 \mathrm{~g} \mathrm{He}<67.2 \mathrm{~L}$ of $\mathrm{N}_{2}$ at STP $<1 \mathrm{~mol} \mathrm{Of} \mathrm{H}_{2} \mathrm{SO}_{4}<44.8 \mathrm{~L}$ of $\mathrm{NH}_{3}$ at STP $<180 \mathrm{~g}$ of Water

Mass of samples b, cand d
b. 44.8 ${\mathrm{L} \mathrm{of} \mathrm{NH}_{3} \text { at STP }}^{\text {ST }}$

## 3. 90 g of Water $\left(\mathrm{H}_{2} \mathrm{O}\right)$

| Number of GMM | $=$ Given mass in grams / GMM of the Element |
| ---: | :--- |
|  | $=90 \mathrm{~g} / 18 \mathrm{~g}=\mathbf{5}$ |
|  | $=$ Number of GMM x $6.022 \times 10^{23}$ |
|  | $=5 \boldsymbol{X} \boldsymbol{N}_{\boldsymbol{A}}$ |

Number of atoms in 1 molecule of Water $\left(\mathrm{H}_{2} \mathrm{O}\right)=2+1=3$
Therefore ;
Total Number of atoms in $5 \times N_{A}$ molecules of Water $=3 \times 5 \times N_{A}=15 N_{A}$
Number of electrons in 1 molecule of Water $=2+8=10$
Therefore;
Total Number of electrons in $5 \times N_{A}$ molecules of Water $=10 \times 5 \times N_{A}=50 \times N_{A}$
