

KHM HIGHER SECONDARY SCHOOL, VALAKKULAM
FIRST TERMINAL EVALUATION - 2021
CHEMISTRY

Time: 40 Minutes. **STD: X.** **Max.Marks: 20**

1. Write the suitable pair
d block elements : transition elements ①
f block elements : ___
2. 50L of CO_2 is kept in a cylinder at 5atm. The gas is to be transferred completely to another cylinder having a volume of 100L. What will be the pressure of gas in the new cylinder ? ②
3. Which of the following is the outermost electronic configuration of copper? Justify your answer. ②
[Atomic number of Cu = 29]
A: $3d^9 4s^2$
B: $3d^{10} 4s^1$
4. Select and write down the properties of s block elements from the statements given below. ②
 - a) Metallic hydroxides shows basic character
 - b) Produces coloured compounds
 - c) Produces ionic compounds
 - d) Shows different oxidation states.
5. The diagram x, y, z represents the same balloon at different heights. Analyse the diagram & answer the questions .

 - a) Which diagram represents the balloon at the highest altitude?
 - b) Give reason for your answer?
 - c) To which gas law does your answer relate?

6. Subshell electronic configuration of some elements are given. [Symbols are not real] (3)

A - $1s^2 2s^2 2p^4$

B - $1s^2 2s^2 2p^6 3s^1$

C - $1s^2 2s^2 2p^6 3s^2 3p^6 4s^1$

D - $1s^2 2s^2 2p^6 3s^2 3p^6 3d^6 4s^2$

- a) Find the atomic no. of element 'B'?
- b) Which subshell in element 'D' has the highest energy?
- c) To which period does the element 'C' belong?

7. Analyse the given subshell electronic configuration and answer the following? (2)

A - $1s^2 2s^2 2p^6 3s^2 3p^6 3d^6 4s^2$

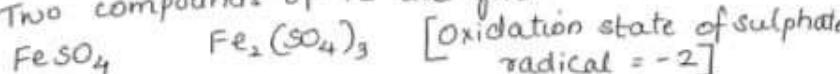

B - $1s^2 2s^2 2p^6 3s^2 3p^6$

C - $1s^2 2s^2 2p^6 3s^2 3p^1$

D - $1s^2 2s^2 2p^6 3s^2$

- a) Which element normally shows +2 oxidation state?
- b) Which one of the above is 's' block element?
- c) Name the element that doesn't take part in the chemical reaction?

8. Two compounds of Fe are given.

- a) In which compound does iron shows +2 oxidation state?
- b) Name the compound which shows Fe^{3+} ion?
- c) Write the subshell electronic configuration of Fe^{3+} ion?
- d) Why transition elements shows variable oxidation states? (4)
