5X4=20

5. How are maps useful to people ?
6. Describe the main stages of the water cycle ?
7. Kings and chiefs built irrigation tanks to improve agriculture in the Kakatiya times. What would they do now ?
8. **Read the following paragraph and answer the questions that follows.**

Most of the rocks under the soil in Andhra Pradesh consists of granites which are hard and impervious. However, the top portion of these rocks (about 20 meters) are broken (weathered) and they carry water. Many of these rocks also have deep cracks going down to 50 or 100 meters depth. These cracks too contain water. Normally with ordinary wells that we dig we tap the water present in the top weathered layer. Tube wells which are dug with the help of drill machines reach the deep cracks and draw water from them.

Questions:

1. Which rock layer is present in the earth layers in Andhra Pradesh ?
2. How many meters the top portion of Granite rocks are Broken and water reaches ?
3. Normally with ordinary wells that we dig, which layer water we tap ?
4. How many meters depth we have deep cracks ?
