# ICSE BOARD EXAMINATION COMPUTER APPLICATIONS Class-10

Maximum Marks: 100

Time allowed: Twohours

Answer to this Paper must be written on the paper provided separately. You will **not** be allowed to write during the first **15** minutes. This time is to be spent in reading the question paper. The time given at the head of this Paper is the time allowed for writing the answers.

*This Paper is divided into two Sections. Attempt all questions from Section A and any four questions from Section B. The intended marks for questions or parts of questions are given in brackets* 

## Section-A

(Attempt all questions from this Section.)

Question 1	L
------------	---

Choose the correct answers to the questions from the given options.

CHOOS	se the correct answers to the questions norm the given o	μιιο	115.
(Do n	ot copy the questions, write the correct answers only.)		
(i)	A mechanism where one class acquires the properties of another class;		
	(a) Polymorphism	(b)	Inheritance
	(c) Encapsulation	(d)	Abstraction
(ii)	Identify the type of operator &&:		
	(a) ternary	(b)	unary
	(c) logical	(d)	relational
(iii)	The Scanner class method used to accept words with space:		
	(a) next()	(b)	nextLine()
	(c) next()	(d)	nextString()
(iv)	The keyword used to call package in the program:		
	(a) extends	(b)	export
	(c) import	(d)	package
(v)	What value will Math.sqt (Math. ceil (15.3)) return?		
	(a) 16.0	(b)	16
	<b>(c)</b> 4.0	(d)	5.0
(vi)	The absence of which statement leads to fall through si	tua	tion in which case statement?
	(a) continue	(b)	break
	(c) return	(d)	System.exit(0)
(vii)	State the type of loop in the given program segment: for	or	
	(int i = 5;i! = 0; i – = 2 System.out.println(i);		
	(a) finite	(b)	infinite
	(c) null	(d)	fixed
(viii)	Write a method prototype name check()which takes an	inte	eger argument and returns a char:
	(a) char check()	(b)	void check (int <i>x</i> )
	(c) check (int x)	(d)	char check (intx)
(ix)	The number of values that a method can return is:		
	(a) 1	(b)	2
	(c) 3	(d)	4

[20]

(40 Marks)

(x)	Predict the output of the following code snippet: String Integer.parseIntP);	g P = "20",Q ="22". int a =	
	int b = Integer.valueOf(Q);		
	System.out.println(a + "" + b);	11.2000	
	(a) 20	(b) 2022	
<i>(</i> •)	(c) 2220	(d) 22	
(xi)	The String class method to join two strings is:		
	(a) concat(String)	(b) <string>.joint(string)</string>	
(	(c) concat(char)	(d) Concat()	
(xii)	The output of the function "COMPOSITION".substring (		
	(a) POSI (c) MPO	(b) POS	
(,;;;)	.,	(d) MPOS	
(XIII)	int x = (int) 32.8; is an example of typeca	(b) automatic	
	<ul><li>(a) implicit</li><li>(c) explicit</li></ul>	(d) coercion	
(viv)	The code obtained after compilation is known as:		
(XIV)	(a) source code	(b) object code	
	(c) machine code	(d) java bytecode	
(xv)	Missing a semicolon in a statement in what type of error		
(~)	(a) Logical	(b) Syntax	
	(c) Runtime	(d) Noerror	
(xvi)	Consider the following program segment and select the		
(,,,,)	when n = 10: switch(n)		
	(case 10: System.out.println(n*2); case 4:		
	System.out.println(n*4);break; default:		
	System.out.println(n);		
	}		
	(a) $\frac{20}{40}$		
	40	(b) $\begin{array}{c} 10 \\ 4 \end{array}$	
	(c) 20, 40	(b) $_{4}$ (d) $_{10}^{10}$	
(xvii)	<b>(c)</b> 20, 40 A method which does not modify the value of variables	(d) ${}^{10}_{10}$ s is termed as:	
(xvii)	<ul><li>(c) 20, 40</li><li>A method which does not modify the value of variables</li><li>(a) Impure method</li></ul>	<ul> <li>(d) <sup>10</sup><sub>10</sub></li> <li>s is termed as:</li> <li>(b) Pure method</li> </ul>	
. ,	<ul> <li>(c) 20, 40</li> <li>A method which does not modify the value of variables</li> <li>(a) Impure method</li> <li>(c) Primitive method</li> </ul>	<ul> <li>(d) <sup>10</sup>/<sub>10</sub></li> <li>s is termed as:</li> <li>(b) Pure method</li> <li>(d) User defined method</li> </ul>	
. ,	<ul> <li>(c) 20, 40</li> <li>A method which does not modify the value of variables</li> <li>(a) Impure method</li> <li>(c) Primitive method</li> <li>When an object of a Wrapper class is converted to its convert</li></ul>	<ul> <li>(d) <sup>10</sup>/<sub>10</sub></li> <li>s is termed as:</li> <li>(b) Pure method</li> <li>(d) User defined method</li> <li>prresponding primitive data type, it is called as</li></ul>	
. ,	<ul> <li>(c) 20, 40</li> <li>A method which does not modify the value of variables</li> <li>(a) Impure method</li> <li>(c) Primitive method</li> <li>When an object of a Wrapper class is converted to its co</li> <li>(a) Boxing</li> </ul>	<ul> <li>(d) <sup>10</sup>/<sub>10</sub></li> <li>s is termed as:</li> <li>(b) Pure method</li> <li>(d) User defined method</li> <li>prresponding primitive data type, it is called as</li></ul>	
(xviii)	<ul> <li>(c) 20, 40</li> <li>A method which does not modify the value of variables</li> <li>(a) Impure method</li> <li>(c) Primitive method</li> <li>When an object of a Wrapper class is converted to its co</li> <li>(a) Boxing</li> <li>(c) Unboxing</li> </ul>	<ul> <li>(d) <sup>10</sup>/<sub>10</sub></li> <li>s is termed as:</li> <li>(b) Pure method</li> <li>(d) User defined method</li> <li>prresponding primitive data type, it is called as</li></ul>	
(xviii)	<ul> <li>(c) 20, 40</li> <li>A method which does not modify the value of variables</li> <li>(a) Impure method</li> <li>(c) Primitive method</li> <li>When an object of a Wrapper class is converted to its convert</li></ul>	<ul> <li>(d) <sup>10</sup><sub>10</sub></li> <li>s is termed as:</li> <li>(b) Pure method</li> <li>(d) User defined method</li> <li>prresponding primitive data type, it is called as</li></ul>	
(xviii)	<ul> <li>(c) 20, 40</li> <li>A method which does not modify the value of variables</li> <li>(a) Impure method</li> <li>(c) Primitive method</li> <li>When an object of a Wrapper class is converted to its convert</li></ul>	<ul> <li>(d) <sup>10</sup><sub>10</sub></li> <li>s is termed as:</li> <li>(b) Pure method</li> <li>(d) User defined method</li> <li>orresponding primitive data type, it is called as</li></ul>

(xviii) (xix) (xx) Quest	<ul> <li>(c) 20, 40</li> <li>A method which does not modify the value of variables</li> <li>(a) Impure method</li> <li>(c) Primitive method</li> <li>When an object of a Wrapper class is converted to its converted to its converted to its converted to its converted.</li> <li>(a) Boxing</li> <li>(c) Unboxing</li> <li>The number of bits occupied by the value 'a' are:</li> <li>(a) 1 bit</li> <li>(c) 4 bits</li> <li>Method which is a part of a class rather than an instance</li> <li>(a) Static method</li> <li>(c) Wrapper class</li> <li>(c) Wrapper class</li> </ul>	<ul> <li>(d) <sup>10</sup>/<sub>10</sub></li> <li>s is termed as:</li> <li>(b) Pure method</li> <li>(d) User defined method</li> <li>prresponding primitive data type, it is called as</li></ul>	
(xviii) (xix) (xx) Quest (i)	(c) 20, 40 A method which does not modify the value of variables (a) Impure method (c) Primitive method When an object of a Wrapper class is converted to its co (a) Boxing (c) Unboxing The number of bits occupied by the value 'a' are: (a) 1 bit (c) 4 bits Method which is a part of a class rather than an instance (a) Static method (c) Wrapper class ion 2 Write the Java expression for $(a + b)^x$ .	<ul> <li>(d) <sup>10</sup>/<sub>10</sub></li> <li>s is termed as:</li> <li>(b) Pure method</li> <li>(d) User defined method</li> <li>prresponding primitive data type, it is called as</li></ul>	[2]
(xviii) (xix) (xx) Quest (i)	<ul> <li>(c) 20, 40</li> <li>A method which does not modify the value of variables</li> <li>(a) Impure method</li> <li>(c) Primitive method</li> <li>When an object of a Wrapper class is converted to its converted to its of (a) Boxing</li> <li>(c) Unboxing</li> <li>The number of bits occupied by the value 'a' are:</li> <li>(a) 1 bit</li> <li>(c) 4 bits</li> <li>Method which is a part of a class rather than an instance</li> <li>(a) Static method</li> <li>(c) Wrapper class</li> <li>(c) Wrapper class</li> </ul>	<ul> <li>(d) <sup>10</sup>/<sub>10</sub></li> <li>s is termed as:</li> <li>(b) Pure method</li> <li>(d) User defined method</li> <li>prresponding primitive data type, it is called as</li></ul>	[2]
(xviii) (xix) (xx) Quest (i)	(c) 20, 40 A method which does not modify the value of variables (a) Impure method (c) Primitive method When an object of a Wrapper class is converted to its co (a) Boxing (c) Unboxing The number of bits occupied by the value 'a' are: (a) 1 bit (c) 4 bits Method which is a part of a class rather than an instance (a) Static method (c) Wrapper class ion 2 Write the Java expression for $(a + b)^x$ .	<ul> <li>(d) <sup>10</sup>/<sub>10</sub></li> <li>s is termed as:</li> <li>(b) Pure method</li> <li>(d) User defined method</li> <li>prresponding primitive data type, it is called as</li></ul>	
(xviii) (xix) (xx) Quest (i) (ii)	(c) 20, 40 A method which does not modify the value of variables (a) Impure method (c) Primitive method When an object of a Wrapper class is converted to its co (a) Boxing (c) Unboxing The number of bits occupied by the value 'a' are: (a) 1 bit (c) 4 bits Method which is a part of a class rather than an instance (a) Static method (c) Wrapper class ion 2 Write the Java expression for $(a + b)^x$ . Evaluate the expression when the value of $x = 4$ : $x^* =x + x + + + x$	<ul> <li>(d) <sup>10</sup>/<sub>10</sub></li> <li>s is termed as:</li> <li>(b) Pure method</li> <li>(d) User defined method</li> <li>prresponding primitive data type, it is called as</li></ul>	[2]
(xviii) (xix) (xx) Quest (i) (ii)	(c) 20, 40 A method which does not modify the value of variables (a) Impure method (c) Primitive method When an object of a Wrapper class is converted to its co (a) Boxing (c) Unboxing The number of bits occupied by the value 'a' are: (a) 1 bit (c) 4 bits Method which is a part of a class rather than an instance (a) Static method (c) Wrapper class ion 2 Write the Java expression for $(a+b)^x$ . Evaluate the expression when the value of $x = 4$ : $x^* =x + x + + + x$ Convert the following do while loop to for loop:	<ul> <li>(d) <sup>10</sup>/<sub>10</sub></li> <li>s is termed as:</li> <li>(b) Pure method</li> <li>(d) User defined method</li> <li>prresponding primitive data type, it is called as</li></ul>	
(xviii) (xix) (xx) Quest (i) (ii)	(c) 20, 40 A method which does not modify the value of variables (a) Impure method (c) Primitive method When an object of a Wrapper class is converted to its co (a) Boxing (c) Unboxing The number of bits occupied by the value 'a' are: (a) 1 bit (c) 4 bits Method which is a part of a class rather than an instance (a) Static method (c) Wrapper class ion 2 Write the Java expression for $(a+b)^x$ . Evaluate the expression when the value of $x = 4$ : $x^* =x + x + + + x$ Convert the following do while loop to for loop: int $x = 10$ ; do	<ul> <li>(d) <sup>10</sup>/<sub>10</sub></li> <li>s is termed as:</li> <li>(b) Pure method</li> <li>(d) User defined method</li> <li>prresponding primitive data type, it is called as</li></ul>	[2]
(xviii) (xix) (xx) Quest (i) (ii)	(c) 20, 40 A method which does not modify the value of variables (a) Impure method (c) Primitive method When an object of a Wrapper class is converted to its co (a) Boxing (c) Unboxing The number of bits occupied by the value 'a' are: (a) 1 bit (c) 4 bits Method which is a part of a class rather than an instance (a) Static method (c) Wrapper class ion 2 Write the Java expression for $(a + b)^x$ . Evaluate the expression when the value of $x = 4$ : $x^* =x + x + + + x$ Convert the following do while loop to for loop: int $x = 10$ ; do (x = -;	<ul> <li>(d) <sup>10</sup>/<sub>10</sub></li> <li>s is termed as:</li> <li>(b) Pure method</li> <li>(d) User defined method</li> <li>prresponding primitive data type, it is called as</li></ul>	[2]
(xviii) (xix) (xx) Quest (i) (ii)	(c) 20, 40 A method which does not modify the value of variables (a) Impure method (c) Primitive method When an object of a Wrapper class is converted to its co (a) Boxing (c) Unboxing The number of bits occupied by the value 'a' are: (a) 1 bit (c) 4 bits Method which is a part of a class rather than an instance (a) Static method (c) Wrapper class ion 2 Write the Java expression for $(a + b)^x$ . Evaluate the expression when the value of $x = 4$ : $x^* =x + x + + + x$ Convert the following do while loop to for loop: int $x = 10$ ; do (x = -; System.out.print(x);	<ul> <li>(d) <sup>10</sup>/<sub>10</sub></li> <li>s is termed as:</li> <li>(b) Pure method</li> <li>(d) User defined method</li> <li>prresponding primitive data type, it is called as</li></ul>	[2]
(xviii) (xix) (xx) Quest (i) (ii) (iii)	(c) 20, 40 A method which does not modify the value of variables (a) Impure method (c) Primitive method When an object of a Wrapper class is converted to its co (a) Boxing (c) Unboxing The number of bits occupied by the value 'a' are: (a) 1 bit (c) 4 bits Method which is a part of a class rather than an instance (a) Static method (c) Wrapper class ion 2 Write the Java expression for $(a+b)^x$ . Evaluate the expression when the value of $x = 4$ : $x^* = -x + x + + + x$ Convert the following do while loop to for loop: int $x = 10$ ; do (x = -; System.out.print(x); }while $(x > = 1)$ ;	<ul> <li>(d) <sup>10</sup>/<sub>10</sub></li> <li>s is termed as:</li> <li>(b) Pure method</li> <li>(d) User defined method</li> <li>prresponding primitive data type, it is called as</li></ul>	[2] [2]
(xviii) (xix) (xx) Quest (i) (ii)	(c) 20, 40 A method which does not modify the value of variables (a) Impure method (c) Primitive method When an object of a Wrapper class is converted to its co (a) Boxing (c) Unboxing The number of bits occupied by the value 'a' are: (a) 1 bit (c) 4 bits Method which is a part of a class rather than an instance (a) Static method (c) Wrapper class ion 2 Write the Java expression for $(a+b)^x$ . Evaluate the expression when the value of $x = 4$ : $x^* = -x + x + + + x$ Convert the following do while loop to for loop: int $x = 10$ ; do (x = -; System.out.print(x); }while $(x > = 1)$ ; Give the output of the following Character class method	<ul> <li>(d) <sup>10</sup>/<sub>10</sub></li> <li>s is termed as:</li> <li>(b) Pure method</li> <li>(d) User defined method</li> <li>prresponding primitive data type, it is called as</li></ul>	[2]
(xviii) (xix) (xx) Quest (i) (ii) (iii)	(c) 20, 40 A method which does not modify the value of variables (a) Impure method (c) Primitive method When an object of a Wrapper class is converted to its co (a) Boxing (c) Unboxing The number of bits occupied by the value 'a' are: (a) 1 bit (c) 4 bits Method which is a part of a class rather than an instance (a) Static method (c) Wrapper class ion 2 Write the Java expression for $(a+b)^x$ . Evaluate the expression when the value of $x = 4$ : $x^* = -x + x + + + x$ Convert the following do while loop to for loop: int $x = 10$ ; do (x = -; System.out.print(x); }while $(x > = 1)$ ;	<ul> <li>(d) <sup>10</sup>/<sub>10</sub></li> <li>s is termed as:</li> <li>(b) Pure method</li> <li>(d) User defined method</li> <li>prresponding primitive data type, it is called as</li></ul>	[2] [2]

(v)	Rewrite the following code using the if-else statement:	[2]
	int m = 400;	
	double ch = (m > 300)? (m/10.0)*2: (m/20.0)–2;	
(vi)	Give the output of the following program segment:	[2]
	int n = 4279; int d;	
	while(n>0)	
	{d = n%10;	
	System.out.println(d);	
	n = n/100;	
	}	
(vii)	Give the output of the following String class methods:	[2]
	(a) "COMMENCEMENT". last IndexOf ('M')	
	(b) "devote".compareTo ("DEVOTE")	
(viii)	Consider the given array and answer the questions given below:	[2]
	int x[] = {4,7,9,66,72,0,16};	
	(a) What is the length of the array?	
	(b) What is the value in x[4]?	
(ix)	Name the following:	[2]
	(a) What is an instance of the class called?	
	(b) The method which has same name as that of the class name.	
(x)	Write the value of <i>n</i> after execution:	[2]
	char ch = 'd';	

int n = ch + 5;

sorted array and original array.

## Section-B

(60 Marks)

	(Attempt <b>any four</b> questio	ns from this <b>Section</b> .)				
The answers in this section should consist of the programs in either Blue J environment or any						
	program environment with java as the base.					
Each progra	Each program should be written using variable description mnemonic codes so that the logic of the					
, ,	program is clearly depicted.					
	Flowcharts and algorithms are not required.					
Question 3			[15]			
Design a class with t	he following specifications:					
Class name:	Stuc	dent				
Member variables:	nar	ne - name of student				
	age	- age of student mks -				
	Ŭ	ks obtained				
	stream - stream allocated					
	(Declare the variables using appropriate data types)					
Member methods:	· ·		,			
void accept()						
void <b>allocation()</b> - All	ocate the stream as per following criter	ia:				
	mks	stream				
	> = 300	Science and Computer				
		00 Commerce and Computer				
	> = 75 and 200	Arts an Animation				
	< 75	Try Again				
void <b>print()</b>	- Display Student name, age, mks a	nd stream allocated. Call				
all the above methor	ds in main method using an object.					
Question 4			[15]			
Define a class to accept 10 characters from a user. Using bubble sort technique arrange them in ascending order. Display the						

Define a class to overload the function print as follows:

void print() to print the following format 1 111 2222 3333 4444 5555 void print(int n) To check whether the number is a lead number. A lead number is the one whose sum of even digits are equal to sum of odd digits. e.g. 3669 odd digits sum = 3 + 9 = 12 even digits sum = 6 + 6 = 12 3669 is a lead number.

### Define a class to accept a String and print the number of digits, alphabets and special characters in the string. Example: S = "KAPILDEV@83"

Output: Number of digits - 2

Number of Alphabets - 8 Number

of Special characters - 1

### **Question 7**

**Question 6** 

Define a class to accept values into on array of double data type of size 20. Accept a double value from user and search in the array using linear search method. If value is found display message "Found" with its position where it is present in the array. Otherwise display message "not found".

#### Question 8

Define a class to accept values in integer array of size 10. Fin sum of one digit number and sum of two digit numbers entered. Display them separately.

Example: Input: a[] = [2, 12, 4, 9, 18, 25, 3, 32, 20, 1]

Output: Sum of one digit numbers : 2 + 4 + 9 + 3 + 1 = 19Sum of two digit numbers : 12 + 18 + 25 + 32 + 20 = 107 19
