|   |    |             | CH <sub>3</sub>  |     | 3 |
|   |    |             | CH <sub>3</sub> - C - CH <sub>2</sub> - CH <sub>3</sub> 2, 2- Dimethylbutane                             |     |   |
|   |    |             |  |     |   |
|   |    |             | CH <sub>3</sub> OR   |     |   |
|   |    | D           |  | 1   |   |
|   |    | <b>B</b> a) | $CH_3 - CH = CH - CH_2 - CH_3$   | 1   |   |
|   |    | b)          | $CH \equiv C - CH_2 - CH_2 - CH_3$   | 1   |   |
|   |    |             | $CH_3 - C \equiv C - CH_2 - CH_3$  | 1   |   |
|   | 14 | 9)          | In first beaker  | 1   |   |
|   | 14 | a)<br>b)    | Zinc displaces copper from its salt solution. The more reactive  | 1 1 |   |
|   |    |             | metal displaces the less reactive metal from its salt solution.  |     | 3 |
|   |    | (6)         | $Zn + CuSO_4 \longrightarrow ZnSO_4 + Cu$  | 1   |   |
|   | .0 |             |  |     |   |
| C | 15 | A) a)       | Number of moles in $3 \times 6.022 \times 10^{23}$ molecules = 3 mols                                    | 1   |   |
|   |    | b)          | Mass of 3 mols of NH <sub>3</sub> = $3 \times 17 = 51$ g   | 1   |   |
|   |    |             | $3 \times 22.4 L = 67.2 L$   | 1   |   |
|   |    | В           | OR   |     | 3 |
|   |    | a           | Number of moles = $2240/22.4 = 100 \text{ mols}$   | 1   |   |
|   |    | b           | Number of molecules = $100 \times 6.022 \times 10^{23}$  | 1   |   |
|   |    | c           | No. of mols = $396 \text{ g}/44 \text{ g} = 9$   | 1   |   |
| l |    | į.          |  |     |   |

| 16  | (A)<br>a) | Alloys are mixtures of two or more metals. Nonmetals like carbon,  | 1   |   |
|-----|-----------|--|-----|---|
|     | b)        | nitrogen and phosphorous are used for the production of alloys. Fe, Cr, Ni, C  | 1   | 3 |
|     | c)        | Silicon steel  | 1   |   |
| 17  | (A) a)    | i. Rate of backward reaction increases. ii. Rate of backward reaction increases.   | 1 1 |   |
|     | b)        | In a system at equilibrium, increase in temperature will increase the rate of endothermic reaction.  | 2   | 1 |
|     |           | When the pressure of the system at equilibrium is decreased, the system will try to attain equilibrium by increasing the rate of reaction in the direction where the number of moles of molecules increases. So the rate of backward reaction increases. |     | 1 |
|     |           | OR   |     |   |
|     | (B)       |  | 1   | 4 |
|     | a)        | Rate of forward reaction decreases.  | 1   |   |
|     | b)        | Rate of decomposition of SO <sub>3</sub> will increase.  | 1   |   |
|     | c)        | When the pressure of the system at equilibrium is decreased, the system will try to attain equilibrium by increasing the rate of reaction in the direction where the number of moles of molecules increases. So the rate of forward reaction decrease.   | 2   |   |
|     |           | In a system at equilibrium, increase in temperature will increase the rate of endothermic reaction. Rate of backward reaction increases. So the decomposition of SO <sub>3</sub> increase.   |     |   |
| 18  | a)        | 3d n=3 l=2   | 2   |   |
