

SECTION A: READING**1) Read the following passage:****7**

In a small coastal town, where the sea met the sky in a breathtaking embrace, there lay a peculiar lighthouse. Unlike its more conventional counterparts, this lighthouse had not been operational for decades, yet it stood as a silent sentinel over the shore. Its paint, once a vibrant white, had faded to a muted gray, and its glass lantern was clouded with age. Locals often spoke of the lighthouse in hushed tones, recounting tales of a mysterious keeper who had vanished one stormy night, leaving behind only whispers of his existence.

One summer, a group of tourists arrived, intrigued by the stories they had heard. Among them was a young man named Theo, a history enthusiast with a penchant for uncovering forgotten narratives. As he approached the lighthouse, he felt a strange pull, as if the structure itself was beckoning him to uncover its secrets.

Theo spent days exploring the surrounding area, talking to the townsfolk who offered snippets of information. He learned that the keeper had been an eccentric figure, often seen scribbling in notebooks, documenting the ocean's tides and the stars above. It was said that he believed the lighthouse held a hidden treasure, not of gold or jewels, but of knowledge and wisdom lost to time.

Determined to unravel the mystery, Theo ventured inside the lighthouse. Dust motes danced in the sunlight filtering through grimy windows, and the air was thick with the scent of salt and decay. As he ascended the spiral staircase, he stumbled upon a small room filled with the keeper's journals. Each page was filled with meticulous observations and reflections on the natural world, revealing a mind deeply attuned to the rhythms of nature.

As Theo read, he realized that the true treasure was not material wealth, but the insights and connections the keeper had forged with the environment. Inspired by the keeper's dedication, Theo resolved to share these writings with the world, believing that they could inspire others to appreciate the beauty and fragility of nature.

1. There are various beliefs prevalent in the society as to what should be eaten and what should not be eaten to keep healthy. If one has high blood pressure, one is told to cut down on or stop consuming sodium. A new study from Boston University reveals that low sodium does not actually cause low blood pressure.

A little salt is part of a healthy food plan. The study has shown that the people with the lowest intake of sodium along with the ones who have the highest intake of sodium have a greater risk of heart disease than the people in the middle.

2. There is a theory that drinking milk post infancy is unnatural. It is true that humans are the only species to drink milk as adults. Research shows that we have genetically evolved to adapt to it. Milk products actually play an important role in keeping us healthy. Dairy products are rich in whey, protein, linoleic acid and calcium.

3. Fat in general is not a bad thing. The scientific community is still debating the benefits of saturated fats. The other types of fats taken in moderation are good for us. Plant-based fats such as monosaturated fats found in foods like almonds, avocado and omega-3 fatty acids found in fish offer many healthy benefits. These fats may reduce inflammation and improve the quality of blood.

4. It may seem that diet products such as light salad dressing are healthier choices to eat but often they are really not. Healthy food like this used to be popular, but many of these products remove the fat and replace it with added sugar. Large amounts of added sugar in the diet may be even more damaging to health than excessive dietary fat.

A major study from CDC showed that people who consumed a lot of sugar were more than twice likely to die from heart disease. If you opt for a higher food, check the ingredients and food label to make sure that the fats have not been replaced with added sugar. We must study the reports of various researches before adopting any new mode of eating or food habit otherwise the result of the food plan may be opposite of what is expected.
