# **SECTION I**

# Section I has 25 questions.

1. What is the number of distinct terms in the expansion of  $(a+b+c)^{20}$ ?

(a) 231

(b) 253

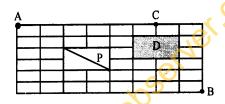

(c) 242

(d) 210

(e) 228

DIRECTIONS for questions 2 & 3: Answer these questions on the basis of the information given below.

The figure below shows the plan of a town. The streets are at right angles to each other. A rectangular park (P) is situated inside the town with a diagonal road running through it. There is also a prohibited region (D) in the town.

2. Neelam rides her bicycle from her house at A to her office at B, taking the shortest path. Then the number of possible shortest paths that she can choose is

(a) 60

(b) 75

(c) 45

(d) 90

(e) 72

3. Neelam rides her bicycle from her house at A to her club at C, via B taking the shortest path. Then the number of possible shortest paths that she can choose is

(a) 1170

(b) 630

(c) 792

(d) 1200

(e) 936

4. Suppose, the seed of any positive integer n is defined as follows:

seed (n) = n, if n < 10 = seed (s (n)), otherwise,

where s (n) indicates the sum of digits of n.

For example, seed (7) = 7, seed (248) = seed (2+4+8) = seed (14) = seed (1+4) = seed (5) = 5 etc. How many positive integers n, such that n < 500, will have seed (n) = 9?

(a) 39

(b) 7

(c) 81

(d) 108

(e) 55

5. The integers 1, 2, ...., 40 are written on a blackboard. The following operation is then repeated 39 times; In each repetition, any two numbers, say a and b, currently on the blackboard are erased and a new number a + b - 1 is written. What will be the number left on the board at the end?

(a) 820

(b) 821

(c) 781

(d) 819

(e) 780

## DIRECTIONS for questions 6 & 7: Answer these questions on the basis of the information given below.

Mark (a) if Q can be answered from A alone but not from B alone.

Mar	k (b) if Q can be answered	from B alone but r	ot from A alon	ie.				
	k (c) if Q can be answered t							
Mar	k (d) if Q can be answered fi	rom A and B togethe	r but not from a	ıny of them alo	ne.			
Mar	k (e) if Q cannot be answere	d even from A and E	together.					
	In a single elimination tour	nament, any player	is eliminated wi	th a single loss	. The tourname	ent is played in m	ultiple r	ounds subjects
to th	e following rules :						(),	
<b>(1)</b>	If the number of players, sa against each other and the	winner moves on to	the next round	I.				
(II)	If the number of players, so round. The remaining $(n - winner moves on to the new Thus, if n is even, then n/2$	1) players are groupe at round. No player	ed into $(n-1)/2$ gets more than	pairs. DIRECTIONS for questions 23 & 24: Answer these questions on the basis of the information given below.

Five horses, Red, White, Grey, Black and Spotted participated in a race. As per the rules of the race, the persons betting on the winning horse get four times the bet amount and those betting on the horse that came in second get thrice the bet amount. Moreover, the bet amount is returned to those betting on the horse that came in third, and the rest lose the bet amount. Raju bets Rs. 3000, Rs. 2000, Rs. 1000 on Red, White and Black horses respectively and ends up with no profit and no loss.

- 23. Which of the following cannot be true?
  - (a) At least two horses finished before Spotted
- (b) Red finished last
- (c) There were three horses between Black and Spotted (d) There were three horses between White and Red
- (e) Grey came in second
- 24. Suppose, in addition, it is known that Grey came in fourth. Then which of the following cannot be true?
  - (a) Spotted came in first (b) Red finished last
- (c) White came in second (d) Black came in second
- (e) There was one horse between Black and White
- 25. The number of common terms in the two sequences 17, 21, 25, ...., 417 and 16, 21, 26, ...., 466 is
  - (a) 78
- (b) 19
- (c) 2
- (d)

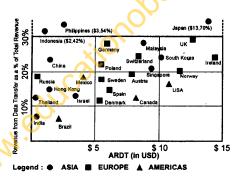

## 22

### **SECTION II**

### Section II has 25 questions.

DIRECTIONS for questions 26 to 28: Answer the following questions based on the information given below:

Telecom operators get revenue from transfer of data and voice. Average revenue received from transfer of each unit of data is known as ARDT. In the diagram below, the revenue received from data transfer as percentage of total revenue received and the ARDT in US Dollars (USD) are given for various countries.

- 26. It is expected that by 2010, revenue from data transfer as a percentage of total revenue will triple for India and double for Sweden. Assume that in 2010, the total revenue in India is twice that of Sweden and that the volume of data transfer is the same in both the countries. What is the percentage increase of ARDT in India if there is no change in ARDT in Sweden?
  - (a) 400%
- (b) 550 %
- (c) 800 %
- (d) 950%

- (e) cannot be determined
- 27. It was found that the volume of data transfer in India is the same as that of Singapore. Then which of the following statements is true?
  - (a) Total revenue is the same in both countries
  - (b) Total revenue in India is about 2 times that of Singapore
  - (c) Total revenue in India is about 4 times that of Singapore
  - (d) Total revenue in Singapore is about 2 times that of India
  - (e) Total revenue in Singapore is about 4 times that of India
- 28. If the total revenue received is the same for the pairs of countries listed in the choices below, choose the pair that has approximately the same volume of data transfer.
  - (a) Philippines and Austria(b) Canada and Poland
- (c) Germany and USA
- (d) UK and Spain

(e) Denmark and Mexico

## DIRECTIONS for questions 29 to 31: Answer the following questions based on the information given below:

For admission to various affiliated colleges, a university conducts a written test with four different sections, each with a maximum of 50 marks. The following table gives the aggregate as well as the sectional cut-off marks fixed by six different colleges affiliated to the university. A student will get admission only if he/she gets marks greater than or equal to the cut-off marks in each of the sections and his/her aggregate marks are at least equal to the aggregate cut off marks as specified by the college.

	Se	Aggregate			
	Section A	Section B	Section C	Section D	Cut-off Marks
College 1	40	42	42		176
College 2		45	45		175
College 3			46		171
College 4	43			45	178
College 5	45		43		180
College 6		41		44	176

29.	Charlie got calls from to	wo colleges. What could	be the minimum marks obtained	by him in a section?		
	(a) 0	(b) 21	(c) 25	(d) 35	(e)	41
30.	Bhama got calls from a	I colleges. What could be	e the minimum aggregate marks	obtained by her?		
	(a) 180	(b) 181	(c) 196	(d) 176	(e)	184

31. Aditya did not get a call from even a single college. What could be the maximum aggregate marks obtained by him?

(a) 181
(b) 176
(c) 184
(d) 196
(e) 190

# DIRECTIONS for questions 32 to 34: Answer the following questions based on the information given below:

There are 100 employees in an organization across five departments. The following table gives the department-wise distribution of average age, average basic pay and allowances. The gross pay of an employee is the sum of his/her basic pay and allowances.

Department	Number of Employees	Average Age (Years)	Average Basic Pay (Rs.)	Allowances (% of Basic Pay)
HR	5	45	5000	70
Marketing	30	35	6000	80
Finance	20	30	6500	60
Business Development	35	42	7500	75
Maintenance	10	35	5500	50

There are limited numbers of employees considered for transfer/promotion across departments. Whenever a person is transferred/promoted from a department of lower average age to a department of higher average age, he/she will get an additional allowance of 10% of basic pay over and above his/her current allowance. There will not be any change in pay structure if a person is transferred/promoted from a department with higher average age to a department with lower average age.

## Questions below are independent of each other.

2. What is the approximate percentage change in the average g with basic pay of Rs. 8000 from the Marketing department?						the HR department	due to tr	ansfer of a 40-year old persor
witt	i basic pay of Ks. 8000 i	rom i	nie mankeniik	department:

# DIRECTIONS for questions 47 to 50: Answer the following questions based on the information given below:

The bar chart below shows the revenue received, in million US Dollars (USD), from subscribers to a particular Internet service. The data covers the period 2003 to 2007 for the United States (US) and Europe. The bar chart also shows the estimated revenues from subscription to this service for the period 2008 to 2010.

47.	Consider the annual percent change in the gap between subscription revenues in the	US a	nd Europe.	what is the year	r in which	the
	absolute value of this change is the highest?	1	·	•		

- (a) 03-04
- (b) 05-06
- (c) 06-07
- (d) 08-09
- (e) 09-10
- 48. While the subscription in Europe has been growing steadily towards that of the US, the growth rate in Europe seems to be declining. Which of the following is closest to the percent change in growth rate of 2007 (over 2006) relative to the growth rate of 2005 (over 2004)?
  - (a) 17
- (b) 20
- (c) 35
- (d) 60
- (e) 100
- 49. The difference between the estimated subscription in Europe in 2008 and what it would have been if it were computed using the percentage growth rate of 2007 (over 2006), is closest to:
  - (a) 50
- (b) 80
- (c) 20
- (d) 10
- (e) 0
- 50. In 2003, sixty percent of subscribers in Europe were men. Given that women subscribers increase at the rate of 10 percent per annum and men at the rate of 5 percent per annum, what is the approximate percentage growth of subscribers between 2003 and 2010 in Europe? The subscription prices are volatile and may change each year.
  - (a) 6
- (b) 15
- (c) 78
- (d) 84
- (e) 50

### **SECTION III**

#### Section III has 40 questions.

DIRECTIONS for questions 51 to 54: In each of the questions, a word has been used in sentences in five different ways. Choose the option corresponding to the sentence in which the usage of the word is incorrect or inappropriate.

### 51. Run

- (a) I must run fast to catch up with him.
- (b) Our team scored a goal against the run of play.
- (c) You can't run over him like that.
- (d) The newly released book is enjoying a popular run.
- (e) This film is a run-of-the-mill production.

## 52. Round

- (a) The police fired a round of tear gas shells.
- (b) The shop is located round the corner.
- (c) We took a ride on the merry-go-round.
- (d) The doctor is on a hospital round.
- (e) I shall proceed further only after you come round to admitting it.

		ekle						
	(a)	After the long hike our knees were beginning to bu	ckie.					
	(b)	The horse suddenly broke into a buckle.						
		The accused did not buckle under police interrogat		*				
	(d)	Sometimes, an earthquake can make a bridge buckle	). -4 :4-					
		People should learn to buckle up as soon as they g	et into	a car.				
•	File		4.	1 14.61				
	(a)	You will find the paper in the file under C.	٠,	I need to file an insur				
	(c)	The cadets were marching in a single file.	(a)	File your nails before	you a	opiy nan ponsi	1.	
	(e)	When the parade was on, a soldier broke the file.

61. A. Charges and countercharges mean nothing

67. Most people at their first consultation take a furtive look at the surgeon's hands in the hope of reassurance. Prospective patients look for delicacy, sensitivity, steadiness, perhaps unblemished pallor. On this basis, Henry Perowne loses a number of cases each year. Generally, he knows it's about to happen before the patient does: the downward glance repeated, the prepared questions beginning to falter, the overemphatic thanks during the retreat to the door.

- (a) Other people do not communicate due to their poor observation.
- (b) Other patients don't like what they see but are ignorant of their right to go elsewhere.
- (c) But Perowne himself is not concerned.
- (d) But others will take their place, he thought.
- (e) These hands are steady enough, but they are large.
- 68. Trade protectionism, disguised as concern for the climate, is raising its head. Citing competitiveness concerns, powerful industrialized countries are holding out threats of a levy on imports of energy-intensive products from developing countries that refuse to accept their demands. The actual source of protectionist sentiment in the OECD countries is, of course, their current lacklustre economic performance, combined with the challenges posed by the rapid economic rise of China and India in that order.
  - (a) Climate change is evoked to bring trade protectionism through the back door.
  - (b) OECD countries are taking refuge in climate change issues to erect trade barriers against these two countries.
  - (c) Climate change concerns have come as a convenient stick to beat the rising trade power of China and India.
  - (d) Defenders of the global economic status quo are posing as climate change champions.
  - (e) Today's climate change champions are the perpetrators of global economic inequity.
- 69. Mattancherry is Indian Jewry's most famous settlement. Its pretty streets of pastel coloured houses, connected by first-floor passages and home to the last twelve saree-and-sarong-wearing, white-skinned Indian Jews are visited by thousands of tourists each year. Its synagogue, built in 1568, with a floor of blue-and-white Chinese tiles, a carpet given by Haile Selassie and the frosty Yaheh selling tickets at the door, stands as an image of religious tolerance.
  - (a) Mattancherry represents, therefore, the perfect picture of peaceful co-existence.
  - (b) India's Jews have almost never suffered discrimination, except for European colonizers and each other.
  - (c) Jews in India were always tolerant.
  - (d) Religious tolerance has always been only a façade and nothing more.
  - (e) The pretty pastel streets are, thus, very popular with the tourists.
- 70. Given the cultural and intellectual interconnections, the question of what is 'Western' and what is 'Eastern' (or 'Indian') is often hard to decide, and the issue can be discussed only in more dialectical terms. The diagnosis of a thought as 'purely Western' or 'purely Indian' can be very illusory.
  - (a) Thoughts are not the kind of things that can be easily categorized.
  - (b) Though 'occidentalism' and 'orientalism' as dichotomous concepts have found many adherents.
  - (c) 'East is East and West is West' has been a discredited notion for a long time now.
  - (d) Compartmentalizing thoughts is often desirable.
  - (e) The origin of a thought is not the kind of thing to which 'purity' happens easily.

DIRECTIONS for questions 71 to 75: The passage given below is followed by a set of five questions. Choose the most appropriate answer to each question.

To summarize the Classic Maya collapse, we can tentatively identify five strands. I acknowledge, however, that Maya archaeologists still disagree vigourously among themselves - in part, because the different strands evidently varied in importance among different parts of the Maya realm; because detailed archaeological studies are available for only some Maya sites; and because it remains puzzling why most of the Maya heartland remained nearly empty of population and failed to recover after the collapse and after re-growth of forests.

With those caveats, it appears to me that one strand consisted of population growth outstripping available resources: a dilemma similar to the one foreseen by Thomas Malthus in 1798 and being played out today in Rwanda, Haiti and elsewhere. As the archaeologist David Webster succinctly puts it, "Too many farmers grew too many crops on too much of landscape." Compounding that mismatch between population and resources was the second strand: the effects of deforestation and hillside erosion, which caused a decrease in the amount of useable farmland at a time when more rather than less farmland was needed, and possibly exacerbated by an anthropogenic drought resulting from deforestation, by soil nutrient depletion and other soil problems, and by the struggle to prevent bracken ferns from overrunning the fields.

The third strand consisted of increased fighting, as more and more people fought over fewer resources. Maya warfare, already endemic, peaked just before the collapse. That is not surprising when one reflects that at least five million people, perhaps many more, were crammed into an area smaller than the US state of Colorado (104,000 square miles). That warfare would have decreased further the amount of land available for agriculture, by creating no-man's lands between principalities where it was now unsafe to farm. Bringing matters to a head was the strand of climate change. The drought at the time of the Classic collapse was not the first drought that the Maya had lived

through, but it was the most severe. At the time of previous droughts, there were still uninhabited parts of the Maya landscape, and people at a site affected by drought could save themselves by moving to another site. However, by the time of the Classic collapse the landscape was now full, there was no useful unoccupied land in the vicinity on which to begin anew, and the whole population could not be accommodated in the few areas that continued to have reliable water supplies.

As our fifth strand, we have to wonder why the kings and nobles failed to recognize and solve these seemingly obvious problems undermining their society. Their attention was evidently focused on their short-term concerns of enriching themselves, waging wars, erecting monuments, competing with each other, and extracting enough food from the peasants to support all those activities. Like most leaders throughout human history, the Maya kings and nobles did not heed long-term problems, insofar as they perceived them.

Finally, while we still have some other past societies to consider before we switch our attention to the modern world, we must already be struck by some parallels between the Maya and the past societies. As on Mangareva, the Maya environmental and population problems led to increasing warfare and civil strife. Similarly, on Easter Island and at Chaco Canyon, the Maya peak population numbers were followed swiftly by political and social collapse. Paralleling the eventual extension of agriculture from Easter Island's coastal lowlands to its uplands, and from the Mimbres floodplain to the hills, Copan's inhabitants also expanded from the floodplain to the more fragile hill slopes, leaving them with a larger population to feed when the agricultural boom in the hills went bust. Like Easter Island chiefs erecting ever larger statues, eventually crowned by pukao, and like Anasazi elite treating themselves to necklaces of 2,000 turquoise heads. Maya kings sought to outdo each other with more and more impressive temples, covered with thicker and thicker plaster - reminiscent in turn of the extravagant conspicuous consumption by modern American CEOs. The passivity of Easter chiefs and Maya kings in the face of the real big threats to their societies completes our list of disquieting parallels.

- 71. According to the passage, which of the following best represents the factor that has been cited by the author in the context of Rwanda and Haiti?
  - (a) Various ethnic groups competing for land and other resources
  - (b) Various ethnic groups competing for limited land resources
  - (c) Various ethnic groups fighting with each other
  - (d) Various ethnic groups competing for political power
  - (e) Various ethnic groups fighting for their identity
- 72. By an anthropogenic drought, the author means
  - (a) a drought caused by lack of rains.
  - (b) a drought caused due to deforestation.
  - (c) a drought caused by failure to prevent bracken ferns from overrunning the fields.
  - (d) a drought caused by actions of human beings.
  - (e) a drought caused by climate changes.
- 73. According to the passage, the drought at the time of Maya collapse had a different impact compared to the droughts earlier because
  - (a) the Maya kings continued to be extravagant when common people were suffering.
  - (b) it happened at the time of collapse of leadership among Mayas.
  - (c) it happened when the Maya population had occupied all available land suited for agriculture.
  - (d) it was followed by internecine warfare among Mayans.
  - (e) irreversible environmental degradation led to this drought.
- 74. According to the author, why is it difficult to explain the reasons for Maya collapse?
  - (a) Copan inhabitants destroyed all records of that period.
  - (b) The constant deforestation and hillside erosion have wiped out all traces of the Maya kingdom.
  - (c) Archaeological sites of Mayas do not provide any consistent evidence.
  - (d) It has not been possible to ascertain which of the factors best explains as to why the Maya civilization collapsed.
  - (e) At least five million people were crammed into a small area.
- 75. Which factor has not been cited as one of the factors causing the collapse of Maya society?
  - (a) Environmental degradation due to excess population
  - (b) Social collapse due to excess population
  - (c) Increased warfare among Maya people
  - (d) Climate change
  - (e) Obsession of Maya population with their own short-term concerns

DIRECTIONS for questions 76 to 80: The passage given below is followed by a set of five questions. Choose the most appropriate answer to each question.

A remarkable aspect of art of the present century is the range of concepts and ideologies which it embodies. It is almost tempting to see a pattern emerging within the art field - or alternatively imposed upon it a posteriori - similar to that which exists under the umbrella of science where the general term covers a whole range of separate, though interconnecting, activities. Any parallelism is however - in this instance at least - misleading. A scientific discipline develops systematically once its bare tenets have been established, named and categorized as conventions. Many of the concepts of modern art, by contrast, have resulted from the almost accidental meetings of groups of talented individuals at certain times and certain places. The ideas generated by these chance meetings had twofold consequences. Firstly, a corpus of work would be produced which, in great part, remains as a concrete record of the events. Secondly, the ideas would themselves be disseminated through many different channels of communication - seeds that often bore fruit in contexts far removed from their generation. Not all movements were exclusively concerned with innovation. Surrealism, for instance, claimed to embody a kind of insight which can be present in the art of any period. This claim has been generally accepted so that a sixteenth century painting by Spranger or a mysterious photograph by Atget can legitimately be discussed in surrealist terms. Briefly, then, the concepts of modern art are of many different (often fundamentally different) kinds and resulted from the exposures of painters, sculptors and thinkers to the more complex phenomena of the twentieth century, including our ever increasing knowledge of the thought and products of earlier centuries. Different groups of artists would collaborate in trying to make sense of a rapidly changing world of visual and spiritual experience. We should hardly be surprised if no one group succeeded completely, but achievements, though relative, have been considerable. Landmarks have been established - concrete statements of position which give a pattern to a situation which could easily have degenerated into total chaos. Beyond this, new language tools have been created for those who follow-semantic systems which can provide a springboard for further explorations.

The codifying of art is often criticized. Certainly one can understand that artists are wary of being pigeon-holed since they are apt to think of themselves as individuals - sometimes with good reason. The notion of self - expression, however, no longer carries quite the weight it once did; objectivity has its defenders. There is good reason to accept the ideas codified by artists and critics, over the past sixty years or so, as having attained the status of independent existence - an independence which is not without its own value. The time factor is important here. As an art movement slips into temporal perspective, it ceases to be a living organism - becoming, rather, a fossil. This is not to say that it becomes useless or uninteresting. Just as a scientist can reconstruct the life of a prehistoric environment from the messages codified into the structure of a fossil, so can an artist decipher whole webs of intellectual and creative possibility from the recorded structure of a 'dead' art movement. The artist can match the creative patterns crystallized into this structure against the potentials and possibilities of his own time. As T.S. Eliot observed, no one starts anything from scratch; however consciously you may try to live in the present, you are still involved with a nexus of behaviour patterns bequeathed from the past. The original and creative person is not someone who ignores these patterns, but someone who is able to translate and develop them so that they conform more exactly to his - and our - present needs.

- 76. Many of the concepts of modern art have been the product of
  - (a) ideas generated from planned deliberations between artists, painters and thinkers.
  - (b) the dissemination of ideas through the state and its organizations.
  - (c) accidental interactions among people blessed with creative muse.
  - (d) patronage by the rich and powerful that supported art.
  - (e) systematic investigation, codification and conventions.
- 77. In the passage, the word 'fossil' can be interpreted as
  - (a) an art movement that has ceased to remain interesting or useful.
  - (b) an analogy from the physical world to indicate a historic art movement.
  - (c) an analogy from the physical world to indicate the barrenness of artistic creations in the past.
  - (d) an embedded codification of pre-historic life.
  - (e) an analogy from the physical world to indicate the passing of an era associated with an art movement.
- 78. In the passage, which of the following similarities between science and art may lead to erroneous conclusions?
  - (a) Both, in general, include a gamut of distinct but interconnecting activities.
  - (b) Both have movements not necessarily concerned with innovation.
  - (c) Both depend on collaborations between talented individuals.
  - (d) Both involve abstract thought and dissemination of ideas.
  - (e) Both reflect complex priorities of the modern world.

- 79. The range of concepts and ideologies embodied in the art of the twentieth century is explained by
  - (a) the existence of movements such as surrealism.
  - (b) landmarks which give a pattern to the art history of the twentieth century.
  - (c) new language tools which can be used for further explorations into new areas.
  - (d) the fast changing world of perceptual and transcendental understanding.
  - (e) the quick exchange of ideas and concepts enabled by efficient technology.
- 80. The passage uses an observation by T.S. Eliot to imply that
  - (a) creative processes are not 'original' because they always borrow from the past.
  - (b) we always carry forward the legacy of the past.
  - (c) past behaviours and thought processes recreate themselves in the present and get labeled as 'original' or 'creative'.
  - (d) 'originality' can only thrive in a 'greenhouse' insulated from the past biases.
  - (e) 'innovations' and 'original thinking' interpret and develop on past thoughts to suit contemporary needs.

DIRECTIONS for questions 81 to 85: The passage given below is followed by a set of five questions. Choose the most appropriate answer to each question.

When I was little, children were bought two kinds of ice cream, sold from those white wagons with canopies made of silvery metal: either the two-cent cone or the four-cent ice-cream pie. The two-cent cone was very small, in fact it could fit comfortably into a child's hand, and it was made by taking the ice cream from its container with a special scoop and piling it on the cone. Granny always suggested I eat only a part of the cone, then throw away the pointed end, because it had been touched by the vendor's hand (though that was the best part, nice and crunchy, and it was regularly eaten in secret, after a pretence of discarding it).

The four-cent pie was made by a special little machine, also silvery, which pressed two disks of sweet biscuit against a cylindrical section of ice cream. First you had to thrust your tongue into the gap between the biscuits until it touched the central nucleus of ice cream; then, gradually, you ate the whole thing, the biscuit surfaces softening as they became soaked in creamy nectar. Granny had no advice to give here: in theory the pies had been touched only by the machine; in practice, the vendor had held them in his hand while giving them to us, but it was impossible to isolate the contaminated area.

I was fascinated, however, by some of my peers, whose parents bought them not a four-cent pie but two two-cent cones. These privileged children advanced proudly with one cone in their right hand and one in their left; and expertly moving their head from side to side, they licked first one, then the other. This liturgy seemed to me so sumptuously enviable, that many times I asked to be allowed to celebrate it. In vain. My elders were inflexible: a four-cent ice, yes; but two two-cent ones, absolutely no.

As anyone can see, neither mathematics nor economy nor dietetics justified this refusal. Nor did hygiene, assuming that in due course the tips of both cones were discarded. The pathetic, and obviously mendacious, justification was that a boy concerned with turning his eyes from one cone to the other was more inclined to stumble over stones, steps, or cracks in the pavement. I dimly sensed that there was another secret justification, cruelly pedagogical, but I was unable to grasp it.

Today, citizen and victim of a consumer society, a civilization of excess and waste (which the society of the thirties was not), I realize that those dear and now departed elders were right. Two two-cent cones instead of one at four cents did not signify squandering, economically speaking, but symbolically they surely did. It was for this precise reason, that I yearned for them: because two ice creams suggested excess. And this was precisely why they were denied to me: because they looked indecent, an insult to poverty, a display of fictitious privilege, a boast of wealth. Only spoiled children ate two cones at once, those children who in fairy tales were rightly punished, as Pinocchio was when he rejected the skin and the stalk. And parents who encouraged this weakness, appropriate to little parvenus, were bringing up their children in the foolish theatre of "I'd like to but I can't." They were preparing them to turn up at tourist-class check-in with a fake Gucci bag bought from a street peddler on the beach at Rimini.

Nowadays the moralist risks seeming at odds with morality, in a world where the consumer civilization now wants even adults to be spoiled, and promises them always something more, from the wristwatch in the box of detergent to the bonus bangle sheathed, with the magazine it accompanies, in a plastic envelope. Like the parents of those ambidextrous gluttons I so envied, the consumer civilization

pretends to give more, but actually gives, for four cents, what is worth four cents. You will throwaway the old transistor radio to purchase the new one, that boasts an alarm clock as well, but some inexplicable defect in the mechanism will guarantee that the radio lasts only a year. The new cheap car will have leather seats, double side mirrors adjustable from inside, and a panelled dashboard, but it will not last nearly so long as the glorious old Fiat 500, which, even when it broke down, could be started again with a kick.

The morality of the old days made Spartans of us all, while today's morality wants all of us to be Sybarites.

<ol> <li>Which of the following cannot be inferred from t</li> </ol>	the passage	e?
--	-------------	----

- (a) Today's society is more extravagant than the society of the 1930s.
- (b) The act of eating two ice cream cones is akin to a ceremonial process.
- (c) Elders rightly suggested that a boy turning eyes from one cone to the other was more likely to fall.
- (d) Despite seeming to promise more, the consumer civilization gives away exactly what the thing is worth.
- (e) The consumer civilization attempts to spoil children and adults alike.
- 82. In the passage, the phrase "little parvenus" refers to
  - (a) naughty midgets.
- (b) old hags.
- (c) arrogant people.
- young upstarts.

- (e) foolish kids.
- 83. The author pined for two two-cent cones instead of one four-cent pie because
  - (a) it made dietetic sense.

(b) it suggested intemperance.

(c) it was more fun.

(d) it had a visual appeal.

- (e) he was a glutton.
- 84. What does the author mean by "nowadays the moralist risks seeming at odds with morality"?
  - (a) The moralists of yesterday have become immoral today.
  - (b) The concept of morality has changed over the years.
  - (c) Consumerism is amoral.
  - (d) The risks associated with immorality have gone up
  - (e) The purist's view of morality is fast becoming popular.
- 85. According to the author, the justification for refusal to let him eat two cones was plausibly
  - (a) didactic.
- (b) dietetic.
- (c) dialectic.
- (d) diatonic.
- (e) diastolic.

DIRECTIONS for questions 86 to 90: The passage given below is followed by a set of five questions. Choose the most appropriate answer to each question.

Language is not a cultural artifact that we learn the way we learn to tell time or how the federal government works. Instead, it is a distinct piece of the biological makeup of our brains. Language is a complex, specialized skill, which develops in the child spontaneously, without conscious effort or formal instruction, is deployed without awareness of its underlying logic, is qualitatively the same in every individual, and is distinct from more general abilities to process information or behave intelligently. For these reasons some cognitive scientists have described language as a psychological faculty, a mental organ, a neural system, and a computational module. But I prefer the admittedly quaint term "instinct". It conveys the idea that people know how to talk in more or less the sense that spiders know how to spin webs. Web-spinning was not invented by some unsung spider genius and does not depend on having had the right education or on having an aptitude for architecture or the construction trades. Rather, spiders spin spider webs because they have spider brains, which give them the urge to spin and the competence to succeed. Although there are differences between webs and words, I will encourage you to see language in this way, for it helps to make sense of the phenomena we will explore.

Thinking of language as an instinct inverts the popular wisdom, especially as it has been passed down in the canon of the humanities and social sciences. Language is no more a cultural invention than is upright posture. It is not a manifestation of a general capacity to use symbols: a three-year-old, we shall see, is a grammatical genius, but is quite incompetent at the visual arts, religious iconography, traffic signs, and the other staples of the semiotics curriculum. Though language is a magnificent ability unique to *Homo sapiens* among living species, it does not call for sequestering the study of humans from the domain of biology, for a magnificent ability unique to a particular living species is far from unique in the animal kingdom. Some kinds of bats home in on flying insects using Doppler sonar. Some kinds of migratory birds navigate thousands of miles by calibrating the positions of the constellations against the time of day and year. In nature's

talent show, we are simply a species of primate with our own act, a knack for communicating information about who did what to whom by modulating the sounds we make when we exhale.

Once you begin to look at language not as the ineffable essence of human uniqueness but as a biological adaptation to communicate information, it is no longer as tempting to see language as an insidious shaper of thought, and, we shall see, it is not. Moreover, seeing language as one of nature's engineering marvels - an organ with "that perfection of structure and co-adaptation which justly excites our admiration," in Darwin's words - gives us a new respect for your ordinary Joe and the much-maligned English language (or any language). The complexity of language, from the scientist's point of view, is part of our biological birthright; it is not something that parents teach their children or something that must be elaborated in school - as Oscar Wilde said, "Education is an admirable thing, but it is well to remember from time to time that nothing that is worth knowing can be taught." A preschooler's tacit knowledge of grammar is more sophisticated than the thickest style manual or the most state-of-the-art computer language system, and the same applies to all healthy human beings, even the notorious syntax - fracturing professional athlete and the, you know, like, inarticulate teenage skateboarder. Finally, since language is the product of a well-engineered biological instinct, we shall see that it is not the nutty barrel of monkeys that entertainer-columnists make it out to be.

- 86. According to the passage, which of the following does not stem from popular wisdom on language?
  - (a) Language is a cultural artifact.
- (b) Language is a cultural invention.
- (c) Language is learnt as we grow.
- (d) Language is unique to Homo sapiens.
- (e) Language is a psychological faculty.
- 87. Which of the following can be used to replace the "spiders know how to spin webs" analogy as used by the author?
  - (a) A kitten learning to jump over a wall
- (b) Bees collecting nectar

(c) A donkey carrying a load

- (d) A horse running a Derby
- (e) A pet dog protecting its owner's property
- 88. According to the passage, which of the following is unique to human beings?
  - (a) Ability to use symbols while communicating with one another.
  - (b) Ability to communicate with each other through voice modulation.
  - (c) Ability to communicate information to other members of the species.
  - (d) Ability to use sound as means of communication.
  - (e) All of the above.
- 89. According to the passage, complexity of language cannot be taught by parents or at school to children because
  - (a) children instinctively know language.
- (b) children learn the language on their own.
- (c) language is not amenable to teaching.
- (d) children know language better than their teachers or parents.
- (e) children are born with the knowledge of semiotics.
- 90. Which of the following best summarizes the passage?
  - (a) Language is unique to Homo sapiens.
  - (b) Language is neither learnt nor taught.
  - (c) Language is not a cultural invention or artifact as it is made out.
  - (d) Language is instinctive ability of human beings.
  - (a) I anamaga is mas of armshale unique to human haines
